| <b>1. Analysis of Stress</b>                                      | <b>1</b>  |
| 1.1 Introduction  | 1         |
| 1.2 Body Force, Surface Force and Stress Vector                   | 2         |
| 1.3 The State of Stress at a Point                                | 4         |
| 1.4 Normal and Shear Stress Components                            | 4         |
| 1.5 Rectangular Stress Components                                 | 5         |
| 1.6 Stress Components on an Arbitrary Plane                       | 6         |
| 1.7 Digression on Ideal Fluid                                     | 11        |
| 1.8 Equality of Cross Shears                                      | 12        |
| 1.9 A More General Theorem  | 14        |
| 1.10 Principal Stresses   | 15        |
| 1.11 Stress Invariants  | 16        |
| 1.12 Principal Planes are Orthogonal                              | 18        |
| 1.13 Cubic Equation has Three Real Roots                          | 18        |
| 1.14 Particular Cases   | 20        |
| 1.15 Recapitulation   | 20        |
| 1.16 The State of Stress Referred to Principal Axes               | 25        |
| 1.17 Mohr's Circles for the Three-dimensional State of Stress     | 26        |
| 1.18 Mohr's Stress Plane  | 28        |
| 1.19 Planes of Maximum Shear                                      | 30        |
| 1.20 Octahedral Stresses  | 30        |
| 1.21 The State of Pure Shear                                      | 32        |
| 1.22 Decomposition into Hydrostatic and Pure Shear States         | 33        |
| 1.23 Cauchy's Stress Quadric                                      | 35        |
| 1.24 Lamé's Ellipsoid   | 37        |
| 1.25 The Plane State of Stress                                    | 40        |
| 1.26 Differential Equations of Equilibrium                        | 42        |
| 1.27 Equilibrium Equations for Plane Stress State                 | 44        |
| 1.28 Boundary Conditions  | 47        |
| 1.29 Equations of Equilibrium in Cylindrical Coordinates          | 48        |
| 1.30 Axisymmetric Case and Plane Stress Case                      | 51        |
| <i>Problems</i>   | 52        |
| Appendix 1 Mohr's Circles   | 57        |
| Appendix 2 The State of Pure Shear                                | 59        |
| Appendix 3 Stress Quadric of Cauchy                               | 63        |
| <b>2. Analysis of Strain</b>                                      | <b>66</b> |

|           |  |            |
|-----------|--|------------|
| 2.1       | Introduction   | 66         |
| 2.2       | Deformations   | 67         |
| 2.3       | Deformation in the Neighbourhood of a Point  | 69         |
| 2.4       | Change in Length of a Linear Element   | 71         |
| 2.5       | Change in Length of a Linear Element—Linear Components                                     | 73         |
