|---|-----------|
| Preface to the Second Edition                             | vii       |
| Preface to the First Edition                              | ix        |
| Nomenclature  | xix       |
| <br>  |           |
| <b>1 Introduction</b>                                     | <b>1</b>  |
| 1.1 Prime Movers  | 1         |
| 1.2 Simple Gas Turbine                                    | 3         |
| Review Questions  | 5         |
| <br>  |           |
| <b>2 Review of Basic Principles</b>                       | <b>7</b>  |
| 2.1 Introduction  | 7         |
| 2.2 Definitions and Laws                                  | 7         |
| 2.3 Energy Equation                                       | 15        |
| 2.4 Fluid Dynamics  | 20        |
| 2.5 Basic Definitions                                     | 21        |
| Review Questions  | 26        |
| <br>  |           |
| <b>3 Fundamentals of Rotating Machines</b>                | <b>27</b> |
| 3.1 Introduction  | 27        |
| 3.2 General Fluid Dynamics Analysis                       | 27        |
| 3.3 The Physical Meaning of the Energy Equation           | 31        |
| 3.4 Classification of Machines                            | 33        |
| 3.5 General Thermodynamic Analysis                        | 34        |
| 3.6 Efficiency of Rotating Machines                       | 36        |
| 3.7 Dimensional Analysis of Rotating Machines             | 37        |
| 3.8 Elementary Airfoil Theory                             | 44        |
| Review Questions  | 50        |
| <br>  |           |
| <b>4 Cycle Arrangements</b>                               | <b>51</b> |
| 4.1 Introduction  | 51        |
| 4.2 Open Cycle Arrangements                               | 51        |
| 4.3 The Closed Cycle                                      | 57        |
| 4.4 Basic Requirements of the Working Medium              | 60        |
| 4.5 Properties of Various Working Media                   | 60        |
| 4.6 Applications  | 61        |
| 4.7 Comparison of Gas Turbines with Reciprocating Engines | 63        |

|  |            |
|--|------------|
| Review Questions                                     | 65         |
| <b>5 Ideal Cycles and their Analysis</b>             | <b>67</b>  |
| 5.1 Introduction                                     | 67         |
| 5.2 Assumptions in Ideal Cycle Analysis              | 68         |
| 5.3 The Simple Gas Turbine Cycle                     | 68         |
| 5.4 The Heat Exchange Cycle                          | 72         |
| 5.5 The Reheat Cycle                                 | 75         |
| 5.6 The Reheat and Heat Exchange Cycle               | 79         |
| 5.7 The Intercooled Cycle                            | 81         |
| 5.8 The Intercooled Cycle with Heat Exchanger        | 84         |
| 5.9 The Intercooled and Reheat Cycle                 | 86         |
| 5.10 Intercooled Cycle with Heat Exchange and Reheat | 89         |
| 5.11 Comparison of Various Cycles                    | 91         |
| 5.12 Ericsson Cycle                                  | 93         |
| Worked out Examples                                  | 94         |
| Review Questions                                     | 120        |
| Exercise   | 122        |
| <b>6 Practical Cycles and their Analysis</b>         | <b>127</b> |
| 6.1 Introduction                                     | 127        |
| 6.2 Assumptions                                      | 127        |
| 6.3 Stagnation Properties                            | 128        |
| 6.4 Compressor and Turbine Efficiency                | 129        |
| 6.5 Pressure or Flow Losses                          | 134        |
| 6.6 Heat Exchanger Effectiveness                     | 138        |
| 6.7 Effect of Varying Mass Flow                      | 140        |
| 6.8 Effect of Variable Specific Heat                 | 141        |
| 6.9 Mechanical Losses                                | 142        |
| 6.10 Loss due to Incomplete Combustion               | 142        |
| 6.11 Cycle Efficiency                                | 143        |
| 6.12 Polytropic Efficiency                           | 144        |
| 6.13 Performance of Actual Cycle                     | 148        |
| Worked out Examples                                  | 162        |
| Review Questions                                     | 201        |
| Exercise   | 202        |
| <b>7 Jet Propulsion Cycles and Their Analysis</b>    | <b>211</b> |
| 7.1 Introduction                                     | 211        |
| 7.2 The Ramjet Engine                                | 214        |
| 7.3 The Pulse Jet Engine                             | 220        |
| 7.4 The Turboprop Engine                             | 224        |

|   |            |
|---|------------|
| 7.5 The Turbojet Engine                         | 227        |
| 7.6 Thrust and Thrust Equation                  | 236        |
| 7.7 Specific Thrust of the Turbojet Engine      | 238        |
| 7.8 Efficiencies                                | 239        |
| 7.9 Parameters Affecting Flight Performance     | 247        |
| 7.10 Thrust Augmentation                        | 249        |
| Worked out Examples                             | 256        |
| Review Questions                                | 276        |
| Exercise  | 278        |
| <b>8 Centrifugal Compressors</b>                | <b>283</b> |
| 8.1 Introduction                                | 283        |
| 8.2 Essential Parts of a Centrifugal Compressor | 285        |
| 8.3 Principle of Operation                      | 288        |
| 8.4 Ideal Energy Transfer                       | 291        |
| 8.5 Blade Shapes and Velocity Triangles         | 292        |
| 8.6 Analysis of Flow through the Compressor     | 295        |
| 8.7 Diffuser                                    | 309        |
| 8.8 Volute Casing                               | 313        |
| 8.9 Performance Parameter                       | 315        |
| 8.10 Losses in Centrifugal Compressors          | 317        |
| 8.11 Compressor Characteristics                 | 318        |
| 8.12 Surging and Choking                        | 318        |
| Worked out Examples                             | 321        |
| Review Questions                                | 335        |
| Exercise  | 336        |
| <b>9 Axial Flow Compressors</b>                 | <b>341</b> |
| 9.1 Introduction                                | 341        |
| 9.2 Historical Background                       | 342        |
| 9.3 Geometry and Working Principle              | 343        |
| 9.4 Stage Velocity Triangles                    | 344        |
| 9.5 Work Done Factor                            | 349        |
| 9.6 Enthalpy-Entropy Diagram                    | 351        |
| 9.7 Compressor Stage Efficiency                 | 352        |
| 9.8 Performance Coefficients                    | 353        |
| 9.9 Degree of Reaction                          | 355        |
| 9.10 Flow through Blade Rows                    | 361        |
| 9.11 Flow Losses                                | 364        |
| 9.12 Stage Losses                               | 367        |
| 9.13 Pressure Rise Calculation in a Blade Ring  | 368        |
| 9.14 Performance Characteristics                | 370        |

|  |            |

| Review Questions   | 397        |
| Exercise   | 398        |
| <b>10 Combustion Systems</b>                               | <b>403</b> |
| 10.1 Introduction  | 403        |
| 10.2 Combustion Theory Applied to Gas Turbine Combustor    | 404        |
| 10.3 Factors Affecting Combustion Chamber Design           | 408        |
| 10.4 Factors Affecting Combustion Chamber Performance      | 409        |
| 10.5 Form of Combustion System                             | 414        |
| 10.6 Requirements of the Combustion Chamber                | 415        |
| 10.7 The Process of Combustion in a Gas Turbine            | 417        |
| 10.8 Combustion Chamber Geometry                           | 419        |
| 10.9 Mixing and Dilution                                   | 422        |
| 10.10 Combustion Chamber Arrangements                      | 423        |
| 10.11 Some Practical Problems                              | 425        |
| Review Questions   | 434        |
| <b>11 Impulse and Reaction Turbines</b>                    | <b>435</b> |
| 11.1 Introduction  | 435        |
| 11.2 A Single Impulse Stage                                | 436        |
| 11.3 A Single Reaction Stage                               | 437        |
| 11.4 Multistage Machines                                   | 438        |
| 11.5 Velocity Triangles of a Single Stage Machine          | 439        |
| 11.6 Expression for Work Output                            | 441        |
| 11.7 Blade loading and flow coefficients                   | 442        |
| 11.8 Blade and Stage Efficiencies                          | 442        |
| 11.9 Maximum Utilization Factor for a Single Impulse Stage | 443        |
| 11.10 Velocity-compounding of Multistage Impulse Turbine   | 446        |
| 11.11 Pressure Compounding of Multistage Impulse Turbine   | 450        |
| 11.12 The Reaction Turbine                                 | 451        |
| 11.13 Multistage Reaction Turbines                         | 452        |
| 11.14 Blade-to-Gas Speed Ratio                             | 466        |
| 11.15 Losses and Efficiencies                              | 468        |
| 11.16 Performance Graphs                                   | 469        |
