<i>About the Authors</i>	v
<i>Visual Walkthrough</i>	vii
<i>Preface to the Adapted Edition</i>	xviii
<i>Preface to the Fifth Edition</i>	xx
PART-I	
GENERAL CONCEPTS	1
<hr/>	
1. Types of Applications of Measurement Instrumentation	3
1.1 Why Study Measurement Systems?	3
1.2 Classification of Types of Measurement Applications	5
1.3 Computer-Aided Machines and Processes	7
1.4 Conclusion	8
<i>Problems</i>	9
<i>Bibliography</i>	10
2. Generalized Configurations and Functional Descriptions of Measuring Instruments	11
2.1 Functional Elements of an Instrument	11
2.2 Active and Passive Transducers	16
2.3 Analog and Digital Modes of Operation	17
2.4 Null and Deflection Methods	18
2.5 Input-Output Configuration of Instruments and Measurement Systems	19
2.5.1 Methods of Correction for Interfering and Modifying Inputs	23
2.6 Conclusion	33
<i>Problems</i>	34
3. Generalized Performance Characteristics of Instruments	35
3.1 Introduction	35
3.2 Static Characteristics and Static Calibration	36
3.2.1 Meaning of Static Calibration	36
3.2.2 Measured Value Versus True Value	38
3.2.3 Some Basic Statistics	40
3.2.4 Least-Squares Calibration Curves	50
3.2.5 Calibration Accuracy Versus Installed Accuracy	57

3.2.6	Combination of Component Errors in Overall System-Accuracy Calculations	62
3.2.7	Theory Validation by Experimental Testing	67
3.2.8	Static Sensitivity	68
3.2.9	Linearity	70
3.2.10	Threshold, Noise Floor, Resolution, Hysteresis, and Dead Space	72
3.2.11	Scale Readability	74
3.2.12	Span	75
3.2.13	Generalized Static Stiffness and Input Impedance: Loading Effects	75
3.2.14	Concluding Remarks on Static Characteristics	86
3.3	Dynamic Characteristics	86
3.3.1	Generalized Mathematical Model of Measurement System	86
3.3.2	Digital Simulation Methods for Dynamic Response Analysis	88
3.3.3	Operational Transfer Function	88
3.3.4	Sinusoidal Transfer Function	90
3.3.5	Zero-Order Instrument	91
3.3.6	First-Order Instrument	93
3.3.7	Step Response of First-Order Instruments	97
3.3.8	Ramp Response of First-Order Instruments	100
3.3.9	Frequency Response of First-Order Instruments	101
3.3.10	Impulse Response of First-Order Instruments	105
3.3.11	Second-Order Instrument	108
3.3.12	Step Response of Second-Order Instruments	110
3.3.13	Ramp Response of Second-Order Instruments	111
3.3.14	Frequency Response of Second-Order Instruments	112
3.3.15	Impulse Response of Second-Order Instruments	114
3.3.16	Logarithmic Plotting of Frequency-Response Curves	115
3.3.17	Frequency Spectra of Amplitude-Modulated Signals	121
3.3.18	Experimental Determination of Measurement-System Parameters	133
3.3.19	Loading Effects under Dynamic Conditions	137
	<i>Problems</i>	141
	<i>Bibliography</i>	145

PART-II**MEASURING DEVICES****147****4. Motion and Dimensional Measurement****149**

4.1	Introduction	149
4.2	Fundamental Standards	149
4.3	Relative Displacement: Translational and Rotational	150
4.3.1	Calibration	150
4.3.2	Resistive Potentiometers	154
4.3.3	Resistance Strain Gage	162
4.3.4	Differential Transformers	177
4.3.5	Variable-Inductance and Variable-Reluctance Pickups	186

- 4.3.6 Eddy-Current Noncontacting Transducers 189
- 4.3.7 Capacitance Pickups 191
- 4.3.8 Piezoelectric Transducers 202
- 4.3.9 Digital Displacement Transducers (Translational and Rotary Encoders) 210
- 4.3.10 Ultrasonic Transducers 217
- 4.4 Relative Velocity: Translational and Rotational 219
 - 4.4.1 Calibration 219
 - 4.4.2 Velocity by Electrical Differentiation of Displacement Voltage Signals 220
 - 4.4.3 Average Velocity from Measured Δx and Δt 220
 - 4.4.4 Mechanical Flyball Angular-Velocity Sensor 221
 - 4.4.5 Mechanical Revolution Counters and Timers 223
 - 4.4.6 Tachometer Encoder Methods 224
 - 4.4.7 Laser-Based Methods 224
 - 4.4.8 Stroboscopic Methods 226
 - 4.4.9 Translational-Velocity Transducers (Moving-Coil and Moving-Magnet Pickups) 227
 - 4.4.10 Eddy-Current Drag-Cup Tachometer 229
- 4.5 Relative-Acceleration Measurements 230
- 4.6 Seismic- (Absolute-) Displacement Pickups 230
- 4.7 Seismic- (Absolute-) Velocity Pickups 234
- 4.8 Seismic- (Absolute-) Acceleration Pickups (Accelerometers) 236
 - 4.8.1 Deflection-Type Accelerometers 240
 - 4.8.2 Null-Balance- (Servo-) Type Accelerometers (Servo Accelerometer) 248
 - 4.8.3 Accelerometers for Inertial Navigation 253
 - 4.8.4 Mechanical Loading of Accelerometers on the Test Object 253
 - 4.8.5 Laser Doppler Vibrometers 254
- 4.9 Calibration of Vibration Pickups 255
- 4.10 Jerk Pickups 256
- 4.11 Gyroscopic (Absolute) Angular-Displacement and Velocity Sensors 259
 - Problems* 272
 - Bibliography* 278

5. Force, Torque, and Shaft Power Measurement

279

- 5.1 Standards and Calibration 279
- 5.2 Basic Methods of Force Measurement 281
- 5.3 Characteristics of Elastic Force Transducers 287
 - 5.3.1 Bonded-Strain-Gage Transducers 292
 - 5.3.2 Differential-Transformer Transducers 299
 - 5.3.3 Piezoelectric Transducers 300
 - 5.3.4 Variable-Reluctance/FM-Oscillator Digital Systems 303
 - 5.3.5 Loading Effects 305
- 5.4 Torque Measurement on Rotating Shafts 305
- 5.5 Shaft Power Measurement (Dynamometers) 310

- 5.6 Vibrating-Wire Force Transducers 314
 - Problems 316
 - Bibliography 319

6. Pressure and Sound Measurement 320

- 6.1 Standards and Calibration 320
- 6.2 Basic Methods of Pressure Measurement 321
- 6.3 Deadweight Gages and Manometers 321
 - 6.3.1 Manometer Dynamics 330
- 6.4 Elastic Transducers 331
- 6.5 Vibrating-Cylinder and Other Resonant Transducers 348
- 6.6 Dynamic Testing of Pressure-Measuring Systems 350
- 6.7 High-Pressure Measurement 356
- 6.8 Low-Pressure (Vacuum) Measurement 358
 - 6.8.1 Diaphragm Gages 360
 - 6.8.2 McLeod Gage 361
 - 6.8.3 Knudsen Gage 363
 - 6.8.4 Momentum-Transfer (Viscosity) Gages 364
 - 6.8.5 Thermal-Conductivity Gages 364
 - 6.8.6 Ionization Gages 367
 - 6.8.7 Dual-Gage Technique 369
- 6.9 Sound Measurement 369
 - 6.9.1 Sound-Level Meter 370
 - 6.9.2 Microphones 373
 - 6.9.3 Pressure Response of a Capacitor Microphone 378
 - 6.9.4 Octave and 1/3 Octave Bands 387
 - 6.9.5 Acoustic Intensity 389
 - 6.9.6 Acoustic Emission 391
 - Problems 392
 - Bibliography 394

7. Flow Measurement 395

- 7.1 Local Flow Velocity, Magnitude and Direction 395
 - 7.1.1 Flow Visualization 395
 - 7.1.2 Velocity Magnitude from Pitot-Static Tube 398
 - 7.1.3 Velocity Direction from Yaw Tube, Pivoted Vane, and Servoed Sphere 407
 - 7.1.4 Dynamic Wind-Vector Indicator 410
 - 7.1.5 Hot-Wire and Hot-Film Anemometers 412
 - 7.1.6 Hot-Film Shock-Tube Velocity Sensors 427
 - 7.1.7 Laser Doppler Anemometer (LDA) 427

- 7.2 Gross Volume Flow Rate 430
 - 7.2.1 Calibration and Standards 431
 - 7.2.2 Constant-Area, Variable-Pressure-Drop Meters (“Obstruction” Meters) 435
 - 7.2.3 Averaging Pitot Tubes 450
 - 7.2.4 Constant-Pressure-Drop, Variable-Area Meters (Rotameters) 451
 - 7.2.5 Turbine Meters 457
 - 7.2.6 Positive-Displacement Meters 461
 - 7.2.7 Metering Pumps 463
 - 7.2.8 Electromagnetic Flowmeters 463
 - 7.2.9 Drag-Force Flowmeters 467
 - 7.2.10 Ultrasonic Flowmeters 468
 - 7.2.11 Vortex-Shedding Flowmeters 473
 - Problems* 475
 - Bibliography* 477

8. Temperature Measurement

479

- 8.1 Standards and Calibration 479
- 8.2 Thermal-Expansion Methods 486
 - 8.2.1 Bimetallic Thermometers 486
 - 8.2.2 Liquid-in-Glass Thermometers 488
 - 8.2.3 Pressure Thermometers 489
- 8.3 Thermoelectric Sensors (Thermocouples) 491
 - 8.3.1 Common Thermocouples 498
 - 8.3.2 Reference-Junction Considerations 501
 - 8.3.3 Special Materials, Configurations, and Techniques 503
- 8.4 Electrical-Resistance Sensors 512
 - 8.4.1 Conductive Sensors (Resistance Thermometers) 512
 - 8.4.2 Bulk Semiconductor Sensors (Thermistors) 518
- 8.5 Junction Semiconductor Sensors 522
- 8.6 Digital Thermometers 525
- 8.7 Radiation Methods 526
 - 8.7.1 Radiation Fundamentals 526
 - 8.7.2 Radiation Detectors: Thermal and Photon 532
 - 8.7.3 Automatic Null-Balance Radiation Thermometers 542
 - 8.7.4 Monochromatic-Brightness Radiation Thermometers (Optical Pyrometers) 542
 - 8.7.5 Two-Color Radiation Thermometers 546
 - 8.7.6 Blackbody-Tipped Fiber-Optic Radiation Thermometer 546
 - 8.7.7 Fluoroptic Temperature Measurement 549
 - 8.7.8 Infrared Imaging Systems 550
 - Problems* 553
 - Bibliography* 554

PART-III	
MANIPULATION, TRANSMISSION, AND RECORDING OF DATA	555
9. Manipulating, Computing, and Compensating Devices	557
9.1 Bridge Circuits	557
9.2 Amplifiers	563
9.2.1 Operational Amplifiers	563
9.2.2 Instrumentation Amplifiers	569
9.2.3 Transconductance and Transimpedance Amplifiers	572
9.2.4 Noise Problems, Shielding, and Grounding	573
9.2.5 Charge Amplifiers and Impedance Converters	575
9.2.6 Concluding Remarks	578
9.3 Filters	579
9.3.1 Low-Pass Filters	580
9.3.2 High-Pass Filters	585
9.3.3 Bandpass Filters	585
9.3.4 Band-Rejection Filters	585
9.3.5 Digital Filters	587
9.3.6 Mechanical Filters for Accelerometers	590
9.3.7 Filtering by Statistical Averaging	592
9.4 Integration and Differentiation	592
9.4.1 Integration	592
9.4.2 Differentiation	594
<i>Problems</i>	600
<i>Bibliography</i>	602
10. Data Transmission and Instrument Connectivity	603
10.1 Cable Transmission of Analog Voltage and Current Signals	603
10.2 Cable Transmission of Digital Data	607
10.3 Fiber-Optic Data Transmission	608
10.4 Radio Telemetry	608
10.5 Pneumatic Transmission	614
10.6 Synchro Position Repeater Systems	614
10.7 Slip Rings and Rotary Transformers	614
10.8 Instrument Connectivity	617
10.9 Data Storage with Delayed Playback (An Alternative to Data Transmission)	621
<i>Problems</i>	621
<i>Bibliography</i>	621
11. Voltage-Indicating and-Recording Devices	623
11.1 Standards and Calibration	623
11.2 Analog Voltmeters and Potentiometers	623

11.3	Digital Voltmeters and Multimeters	629	
11.4	Electromechanical Servotype <i>XT</i> and <i>XY</i> Recorders	631	
11.5	Thermal-Array Recorders and Data Acquisition Systems	635	
11.6	Analog and Digital Cathode-Ray Oscilloscopes/Displays and Liquid-Crystal Flat-Panel Displays	636	
11.7	Virtual Instruments	641	
11.8	Magnetic Tape and Disk Recorders/Reproducers	641	
	<i>Bibliography</i>	644	
12.	Measurement Systems Applied to Micro- and Nanotechnology		645
12.1	Microscale Sensors	646	
12.2	Micro-Motion-Positioning Systems	649	
12.3	Particle Instruments and Clean-room Technology	657	
12.4	Partial-pressure Measurements in Vacuum Processes	666	
12.5	Magnetic Levitation Systems for Wafer Conveyors	675	
12.6	Scanning-probe Microscopes	681	
	<i>Bibliography</i>	688	
	Index		689
