Appendix B List of Chapter Concepts		000
Appendix C Statistical Tables		000

Contents

Preface	xiii		
1 Introduction: What Is Ecology?	1		
Overview of Ecology	2		
The Ecology of Forest Birds: Using Field Studies to Test Theory	3		
The Ecology of Bumblebees: Contributions of Field and Laboratory Studies	5		
Forest Nutrient Budgets: Inventories and Large-Scale Experiments	6		
Vegetation Change: Information from Pollen Records and Modeling	8		
The Nature and Scope of Ecology	11		
On the Net	12		
			Soils 29
			Biology 29
			Human Influences 30
		Desert	30
		Geography 31	
		Climate 31	
		Soils 31	
		Biology 32	
		Human Influences 32	
		Mediterranean Woodland and Shrubland	33
		Geography 33	
		Climate 33	
		Soils 33	
		Biology 33	
		Human Influences 35	
		Temperate Grassland	35
		Geography 35	
		Climate 35	
		Soils 36	
		Biology 36	
		Human Influences 36	
		Temperate Forest	37
		Geography 37	
		Climate 37	
		Soils 38	
		Biology 38	
		Human Influences 39	
		Boreal Forest	39
		Geography 40	
		Climate 40	
		Soils 40	
		Biology 41	
		Human Influences 41	
		Tundra	42
		Geography 42	
		Climate 42	
		Soils 42	
		Biology 43	
		Human Influences 44	
		Mountains: Islands in the Sky	44
		Geography 44	
		Climate 45	
		Soils 45	
		Biology 45	
		Human Influences 45	
		Applications & Tools: Climatic Variation and the Palmer Drought Severity Index	47

Section I Natural History

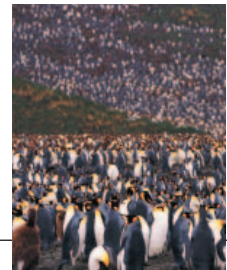

2 Life on Land	14
Terrestrial Biomes	16
Concept Discussion: Large-Scale Patterns of Climatic Variation	17
Temperature, Atmospheric Circulation, and Precipitation	17
Climate Diagrams	18
Concept Discussion: Soil: The Foundation of Terrestrial Biomes	21
Concept Discussion: Natural History and Geography of Biomes	23
Tropical Rain Forest	23
Geography 23	
Climate 23	
Soils 24	
Biology 24	
Human Influences 25	
Tropical Dry Forest	25
Geography 25	
Climate 25	
Soils 27	
Biology 27	
Human Influences 27	
Tropical Savanna	28
Geography 28	
Climate 28	

3	Life in Water	52			
	Concepts	53			
	Concept Discussion: The Hydrologic Cycle	53			
	Concept Discussion: The Natural History of Aquatic Environments	54			
	The Deep Blue Sea	54			
	Geography	55			
	Structure	55			
	Physical Conditions	56			
	Chemical Conditions	58			
	Biology	58			
	Human Influences	9			
	Life in Shallow Marine Waters: Kelp Forests and Coral Gardens	59			
	Geography	61			
	Structure	61			
	Physical Conditions	63			
	Chemical Conditions	63			
	Oxygen	63			
	Biology	63			
	Human Influences	64			
	Marine Shores: Life Between High and Low Tides	64			
	Geography	64			
	Structure	65			
	Physical Conditions	65			
	Temperature	65			
	Water Movements	65			
	Chemical Conditions	66			
	Biology	67			
	Human Influences	68			
	Estuaries, Salt Marshes, and Mangrove Forests	68			
	Geography	68			
	Structure	69			
	Physical Conditions	70			
	Chemical Conditions	71			
	Biology	72			
	Human Influences	72			
	Rivers and Streams: Life Blood and Pulse of the Continents	72			
	Geography	73			
	Structure	73			
	Physical Conditions	73			
	Chemical Conditions	75			
	Biology	76			
	Human Influences	78			
	Lakes: Small Seas	78			
	Geography	78			
	Structure	78			
	Physical Conditions	78			
	Chemical Conditions	80			
	Biology	81			
	Human Influences	81			
	Applications & Tools: Biological Integrity—Assessing the Health of Aquatic Systems	82			
	Number of Species and Species Composition	83			
	Trophic Composition	83			
	Fish Abundance and Condition	84			
	An Application	84			
					
	Section II				
	Individuals				
4	Temperature Relations	89			
	Concepts	90			
	Concept Discussion: Microclimates	90			
	Altitude	91			
	Aspect	91			
	Vegetation	91			
	Color of the Ground	92			
	Presence of Boulders and Burrows	93			
	Aquatic Temperatures	93			
	Concept Discussion: Temperature and Performance of Organisms	94			
	Temperature and Animal Performance	94			
	Extreme Temperatures and Photosynthesis	96			
	Temperature and Microbial Activity	98			
	Concept Discussion: Regulating Body Temperature	99			
	Balancing Heat Gain Against Heat Loss	99			
	Temperature Regulation by Plants	100			
	Desert Plants	100			
	Arctic and Alpine Plants	101			
	Tropical Alpine Plants	101			
	Temperature Regulation by Ectothermic Animals	102			
	<i>Liolaemus</i> Lizards	103			
	Grasshoppers: Some Like It Hot	103			
	Temperature Regulation by Endothermic Animals	105			
	Environmental Temperature and Metabolic Rates	105			
	Aquatic Birds and Mammals	106			
	Warming the Swimming Muscles of Large Marine Fish	107			
	Warming Insect Flight Muscles	108			
	Temperature Regulation by Thermogenic Plants	109			
	Concept Discussion: Surviving Extreme Temperatures	110			
	Inactivity	110			
	Reducing Metabolic Rate	111			
	Hibernation by a Tropical Species	111			
	Applications & Tools: Climatic Warming and the Local Extinction of a Land Snail	113			
5	Water Relations	117			
	Concepts	119			
	Concept Discussion: Water Availability	119			
	Water Content of Air	119			
	Water Movement in Aquatic Environments	120			
	Water Movement Between Soils and Plants	121			

Concept Discussion: Water Regulation on Land	124
Water Acquisition by Animals	125
Water Acquisition by Plants	126
Water Conservation by Plants and Animals	128
Dissimilar Organisms with Similar Approaches to Desert Life	132
Two Arthropods with Opposite Approaches to Desert Life	133
Concept Discussion: Water and Salt Balance in Aquatic Environments	136
Marine Fish and Invertebrates	137
Freshwater Fish and Invertebrates	137
Applications & Tools: Using Stable Isotopes to Study Water Uptake by Plants	138
Stable Isotope Analysis	139
Using Stable Isotopes to Identify Plant Water Sources	140
6 Energy and Nutrient Relations	144
Concepts	145
Concept Discussion: Energy Sources	145
Using Light and CO ₂	146
The Solar-Powered Biosphere	146
Measuring PAR	147
Alternative Photosynthetic Pathways	147
Using Organic Molecules	150
Chemical Composition and Nutrient Requirements	150
Herbivores	150
Detritivores	152
Carnivores	153
Using Inorganic Molecules	154
Concept Discussion: Energy Limitation	157
Photon Flux and Photosynthetic Response Curves	157
Food Density and Animal Functional Response	158
Concept Discussion: Optimal Foraging Theory	159
Testing Optimal Foraging Theory	160
A Model for Diet Breadth	160
Foraging by Bluegill Sunfish	161
Optimal Foraging by Plants	161
Applications & Tools: Bioremediation—Using the Trophic Diversity of Bacteria to Solve Environmental Problems	164
Removing a Mountain of Sewage	164
Leaking Underground Storage Tanks	164
Cyanide and Nitrates in Mine Spoils	165
7 Social Relations	170
Concepts	173
Concept Discussion: Mate Choice	173
Mate Choice and Sexual Selection in Guppies	173
Experimental Tests	174
Mate Choice by Female Guppies	176

Mate Choice Among Scorpionflies	178
Nonrandom Mating Among Wild Radish	180
Concept Discussion: Sociality	183
Cooperative Breeders	184
Green Woodhoopoes	184
African Lions	186
Applications & Tools: The Comparative Method—A Tool for Understanding Complex Evolutionary Histories	188
Eusocial Species	189
Evolution of Eusociality	191

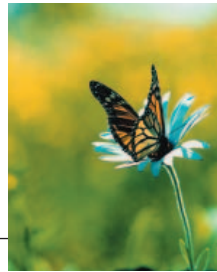

Section III Population Ecology

8 Population Genetics and Natural Selection	197
Concepts	200
Concept Discussion: Variation Within Populations	200
Variation in Plant Populations	200
Phenotypic and Genetic Variation in <i>Potentilla glandulosa</i>	200
Combining Molecular and Morphological Information	201
Variation in Animal Populations	202
Genetic Variation in Alpine Fish Populations	204
Concept Discussion: Hardy-Weinberg	205
Calculating Gene Frequencies	206
Concept Discussion: The Process of Natural Selection	209
Stabilizing Selection	209
Directional Selection	210
Disruptive Selection	210
Concept Discussion: Evolution by Natural Selection	210
Evolution by Natural Selection and Genetic Variation	210
Adaptive Change in Colonizing Lizards	211
Rapid Adaptation by Soapberry Bugs to New Host Plants	214
Concept Discussion: Change Due to Chance	215
Evidence of Genetic Drift in Chihuahua Spruce	215
Genetic Variation in Island Populations	216
Genetic Diversity and Butterfly Extinctions	217
Applications & Tools: Estimating Genetic Variation in Populations	218
Transplant Experiments	218
Molecular Approaches to Genetic Variation	219

9	Population Distribution and Abundance	226			
	Concepts	228			
	Concept Discussion: Distribution Limits	228			
	Kangaroo Distributions and Climate	228			
	A Tiger Beetle of Cold Climates	229			
	Distributions of Plants along a Moisture-Temperature Gradient	230			
	Distributions of Barnacles along an Intertidal Exposure Gradient	231			
	Concept Discussion: Distribution Patterns	233			
	Distributions of Individuals on Small Scales	233			
	Distributions of Tropical Bee Colonies	233			
	Distributions of Desert Shrubs	235			
	Distributions of Individuals on Large Scales	236			
	Bird Populations Across North America	238			
	Plant Abundance Along Moisture Gradients	239			
	Concept Discussion: Metapopulations	240			
	A Metapopulation of an Alpine Butterfly	240			
	Dispersal Within a Metapopulation of Lesser Kestrels	241			
	Concept Discussion: Organism Size and Population Density	242			
	Animal Size and Population Density	243			
	Plant Size and Population Density	244			
	Concept Discussion: Commonness and Rarity	244			
	Seven Forms of Rarity and One of Abundance	244			
	Rarity I: Extensive Range, Broad Habitat Tolerance, Small Local Populations	246			
	Rarity II: Extensive Range, Large Populations, Narrow Habitat Tolerance	246			
	Extreme Rarity: Restricted Range, Narrow Habitat Tolerance, and Small Populations	247			
	Applications & Tools: Estimating Abundance—from Whales to Sponges	247			
	Estimating Whale Population Size	247			
	The Relative Abundance of Corals, Algae, and Sponges	250			
10	Population Dynamics	254			
	Concepts	256			
	Concept Discussion: Patterns of Survival	256			
	Estimating Patterns of Survival	256			
	High Survival Among the Young	257			
	Constant Rates of Survival	258			
	High Mortality Among the Young	259			
	Three Types of Survivorship Curves	259			
	Concept Discussion: Age Distribution	260			
	Stable and Declining Tree Populations	260			
	A Dynamic Population in a Variable Climate	261			
	Concept Discussion: Rates of Population Change	262			
	Estimating Rates for an Annual Plant	262			
	Estimating Rates When Generations Overlap	264			
	Concept Discussion: Dispersal	266			
	Dispersal of Expanding Populations	266			
	Africanized Honeybees	266			
	Collared Doves	268			
	Range Changes in Response to Climate Change	268			
	Dispersal in Response to Changing Food Supply	270			
	Dispersal in Rivers and Streams	270			
	Applications & Tools: Using Population Dynamics to Assess the Impact of Pollutants	272			
11	Population Growth	277			
	Concepts	279			
	Concept Discussion: Geometric and Exponential Population Growth	279			
	Geometric Growth	279			
	Exponential Growth	280			
	Exponential Growth in Nature	280			
	Exponential Growth by Tree Populations	281			
	Conditions for Exponential Growth	281			
	Slowing of Exponential Growth	282			
	Concept Discussion: Logistic Population Growth	282			
	Concept Discussion: Limits to Population Growth	285			
	Environment and Birth and Death Among Galápagos Finches	285			
	Rainfall, Cactus Finches, and Cactus Reproduction	288			
	Concept Discussion: Small and Fast Versus Large and Slow—the Intrinsic Rate of Increase	289			
	Population Growth by Small Marine Invertebrates	289			
	Growth of a Whale Population	290			
	Applications & Tools: The Human Population	291			
	Distribution and Abundance	291			
	Population Dynamics	293			
	Population Growth	294			
12	Life Histories	298			
	Concepts	300			
	Concept Discussion: Offspring Number Versus Size	300			
	Egg Size and Number in Fish	300			
	Seed Size and Number in Plants	302			
	Concept Discussion: Adult Survival and Reproductive Allocation	306			
	Life History Variation Among Species	306			
	Life History Variation Within Species	308			
	Concept Discussion: Life History Classification	311			
	<i>r</i> and <i>K</i> Selection	311			
	Plant Life Histories	312			
	Opportunistic, Equilibrium, and Periodic Life Histories	314			
	Reproductive Effort, Offspring Size, and Benefit-Cost Ratios	315			
	Applications & Tools: Using Life History Information to Restore Riparian Forests	317			

Section IV Interactions

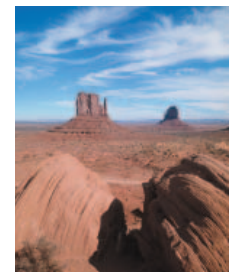

13 Competition	323
Concepts	325
Concept Discussion: Resource Competition	325
Intraspecific Competition Among	
Herbaceous Plants	325
Self-Thinning in Plant Populations	325
Intraspecific Competition Among Planthoppers	326
Interference Competition Among Terrestrial Isopods	327
Concept Discussion: Niches	327
The Feeding Niches of Galápagos Finches	328
The Habitat Niche of a Salt Marsh Grass	330
Concept Discussion: Mathematical and Laboratory Models	330
Modeling Interspecific Competition	331
Laboratory Models of Competition	332
Experiments with <i>Paramecia</i>	332
Experiments with Flour Beetles	333
Concept Discussion: Competition and Niches	334
Niches and Competition Among Plants	334
Niche Overlap and Competition Between Barnacles	335
Competition and the Habitat of a Salt Marsh Grass	337
Competition and the Niches of Small Rodents	337
Character Displacement	338
Evidence for Competition in Nature	340
Applications & Tools: Competition Between Indigenous and Introduced Species	342
14 Exploitation	346
Concepts	347
Concept Discussion: Complex Interactions	347
Parasites and Pathogens That Manipulate	
Host Behavior	348
Parasites That Alter the Behavior of Their Hosts	348
A Plant Pathogen That Mimics Flowers	349
The Entangling of Exploitation with Competition	351
Predation, Parasitism, and Competition in Populations of <i>Tribolium</i>	351
Concept Discussion: Exploitation and Abundance	351
An Herbivorous Stream Insect and Its Algal Food	352
An Introduced Cactus and an Herbivorous Moth	354
A Pathogenic Parasite, a Predator, and Its Prey	355
Concept Discussion: Dynamics	356
Cycles of Abundance in Snowshoe Hares and Their Predators	357
The Role of Food Supply	358
The Role of Predators	359
Experimental Test of Food and Predation Impacts	359

Population Cycles in Mathematical and Laboratory Models	360
Mathematical Models	360
Laboratory Models	361
Concept Discussion: Refuges	363
Refuges and Host Persistence in Laboratory and Mathematical Models	363
Exploited Organisms and Their Wide Variety of “Refuges”	364
Space	364
Protection in Numbers	365
Predator Satiation by an Australian Tree	365
Predator Satiation by Periodical Cicadas	366
Size as a Refuge	367
Applications & Tools: Using Predators to Control a Parasite	369

15 Mutualism	374
Concepts	376
Concept Discussion: Plant Mutualisms	376
Plant Performance	
and Mycorrhizal Fungi	376
Mycorrhizae and the Water Balance of Plants	376
Nutrient Availability and the Mutualistic Balance Sheet	377
Ants and Bullshorn Acacia	379
Experimental Evidence for Mutualism	380
Potential Conflict Between Mutualists	381
A Temperate Plant Protection Mutualism	382
Concept Discussion: Coral Mutualisms	384
Zooxanthellae and Corals	384
A Coral Protection Mutualism	385
Concept Discussion: Evolution of Mutualism	388
Facultative Ant-Plant Protection Mutualisms	389
Applications & Tools: Mutualism and Humans	390
The Honeyguide	391
Guiding Behavior	391

Section V Communities and Ecosystems

16 Species Abundance and Diversity	397
Concepts	399
Concept Discussion: Species Abundance	399
The Lognormal Distribution	399
Concept Discussion: Species Diversity	400
A Quantitative Index of Species Diversity	401
Rank-Abundance Curves	401
Concept Discussion: Environmental Complexity	404
Forest Complexity and Bird Species Diversity	404

Niches, Heterogeneity, and the Diversity of Algae and Plants	405	Actual Evapotranspiration and Terrestrial Primary Production	443
The Niches of Algae and Terrestrial Plants	405	Soil Fertility and Terrestrial Primary Production	444
Complexity in Plant Environments	406	Concept Discussion: Patterns of Aquatic Primary Production	445
Soil and Topographic Heterogeneity and the Diversity of Tropical Forest Trees	407	Patterns and Models	446
Algal and Plant Species Diversity and Increased Nutrient Availability	408	Whole Lake Experiments on Primary Production	446
Nitrogen Enrichment and Ectomycorrhizal Fungus Diversity	408	Global Patterns of Marine Primary Production	447
Concept Discussion: Disturbance and Diversity	409	Concept Discussion: Consumer Influences	448
The Nature of Equilibrium	409	Piscivores, Planktivores, and Lake Primary Production	449
The Nature and Sources of Disturbance	409	Grazing by Large Mammals and Primary Production on the Serengeti	451
The Intermediate Disturbance Hypothesis	410	Concept Discussion: Trophic Levels	453
Disturbance and Diversity in the Intertidal Zone	410	A Trophic Dynamic View of Ecosystems	453
Disturbance and Diversity in Temperate Grasslands	411	Energy Flow in a Temperate Deciduous Forest	454
Applications & Tools: Disturbance by Humans	412	Applications & Tools: Using Stable Isotope Analysis to Trace Energy Flow Through Ecosystems	456
Human Disturbance: An Ancient Feature of the Biosphere	413	Stable Isotope Analysis	456
Disturbance by Humans and the Diversity of Chalk Grasslands	414	Using Stable Isotopes to Identify Sources of Energy in a Salt Marsh	457
17 Species Interactions and Community Structure	418	Food Habits of Prehistoric Human Populations	457
Concepts	419	19 Nutrient Cycling and Retention	462
Concept Discussion: Community Webs	419	The Phosphorus Cycle	463
Detailed Food Webs Reveal Great Complexity	420	The Nitrogen Cycle	464
Strong Interactions and Food Web Structure	422	The Carbon Cycle	465
Concept Discussion: Keystone Species	423	Concepts	466
Food Web Structure and Species Diversity	423	Concept Discussion: Rates of Decomposition	466
Experimental Removal of Starfish	423	Decomposition in Two Temperate Woodland Ecosystems	466
Consumers' Effects on Local Diversity	425	Decomposition in Two Temperate Forest Ecosystems	468
Fish as Keystone Species in River Food Webs	427	Decomposition in Aquatic Ecosystems	469
The Effects of Predation by Birds on Herbivory	429	Concept Discussion: Organisms and Nutrients	472
Concept Discussion: Exotic Predators	432	Nutrient Cycling in Streams	472
Introduced Fish: Predators That Simplify Aquatic Food Webs	432	Stream Invertebrates and Spiraling Length	472
Concept Discussion: Mutualistic Keystones	434	The Effect of Species Richness on Litter Breakdown	473
A Cleaner Fish as a Keystone Species	434	Animals and Nutrient Cycling in Terrestrial Ecosystems	474
Seed Dispersal Mutualists as Keystone Species	434	Plants and the Nutrient Dynamics of Ecosystems	475
Applications & Tools: Humans as Keystone Species	435	The South African Fynbos	475
The Empty Forest: Hunters and Tropical Rain Forest Animal Communities	435	An Introduced Tree and Hawaiian Ecosystems	476
Ants and Agriculture: Keystone Predators for Pest Control	436	Concept Discussion: Disturbance and Nutrients	477
18 Primary Production and Energy Flow	441	Disturbance and Nutrient Loss from the Hubbard Brook Experimental Forest	477
Concepts	441	Flooding and Nutrient Export by Streams	478
Concept Discussion: Patterns of Terrestrial Primary Production	443	Applications & Tools: Altering Aquatic and Terrestrial Ecosystems	479

20 Succession and Stability 484

Concepts 486

Concept Discussion: Community Changes During Succession 486

Primary Succession at Glacier Bay 486

Secondary Succession in Temperate Forests 487

Succession in Rocky Intertidal Communities 488

Succession in Stream Communities 489

Concept Discussion: Ecosystem Changes During Succession 490

Ecosystem Changes at Glacier Bay 490

Four Million Years of Ecosystem Change 491

Recovery of Nutrient Retention Following Disturbance 493

A Model of Ecosystem Recovery 493

Succession and Stream Ecosystem Properties 494

Concept Discussion: Mechanisms of Succession 495

Facilitation 495

Tolerance 496

Inhibition 496

Successional Mechanisms in the Rocky Intertidal Zone 496

Successional Mechanisms in Forests 498

Mechanisms in Old Field Succession 498

Mechanisms in Primary Succession on a Volcanic Substrate 498

Mechanisms of Primary Succession Following Deglaciation 499

Concept Discussion: Community and Ecosystem Stability 500

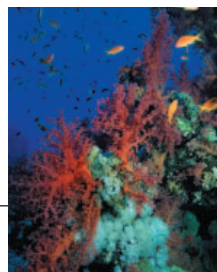

Some Definitions 500

Lessons from the Park Grass Experiment 501

Replicate Disturbances and Desert Stream Stability 501

Applications & Tools: Using Repeat Photography to Detect Long-Term Change 506

Section VI
Large-Scale Ecology

21 Landscape Ecology 511

Concepts 513

Concept Discussion: Landscape Structure 513

The Structure of Six Landscapes in Ohio 513

The Fractal Geometry of Landscapes 515

Concept Discussion: Landscape Processes 516

Landscape Structure and the Dispersal of Small Mammals 517

Habitat Patch Size and Isolation and the Density of Butterfly Populations 518

Habitat Corridors and Movement of Organisms 519

Landscape Position and Lake Chemistry 520

Concept Discussion: Origins of Landscape Structure and Change 522

Geological Processes, Climate, and Landscape Structure 522

Soil and Vegetation Mosaics in the Sonoran Desert 523

Climate and Landscape Structure 525

Organisms and Landscape Structure 525

Fire and the Structure of a Mediterranean Landscape 529

Applications & Tools: Restoring a Riverine Landscape 530

Riverine Restoration: The Kissimmee River 530

22 Geographic Ecology 536

Concepts 538

Concept Discussion: Area, Isolation, and Species Richness 538

Sampling Area and Number of Species 538

Island Area and Species Richness 538

Habitat Patches on Continents: Mountain Islands 539

Lakes as Islands 539

Island Isolation and Species Richness 540

Marine Islands 540

Isolation and Habitat Islands on Continents 541

Concept Discussion: The Equilibrium Model of Island Biogeography 541

Species Turnover on Islands 543

Experimental Island Biogeography 544

Colonization of New Islands by Plants 545

Manipulating Island Area 546

Island Biogeography Update 546

Latitudinal Gradients in Species Richness 546

Time Since Perturbation 547

Productivity 547

Environmental Heterogeneity 547

Favorableness 548

Niche Breadths and Interspecific Interactions 548

Differences in Speciation and Extinction Rates 548

Area and Latitudinal Gradients in Species Richness 548

Continental Area and Species Richness 549

Concept Discussion: Historical and Regional Influences 550

Exceptional Patterns of Diversity 550

Historical and Regional Explanations 552

The Cape Floristic Region of South Africa 552

The Diversity of Temperate Trees 553

Bird Diversity in the Beech Forests of South America 553

Applications & Tools: Global Positioning Systems, Remote Sensing, and Geographic Information Systems 554

Global Positioning Systems 554

Remote Sensing	554	Concept Discussion: Changes in Land Cover	570
Mountain Islands in the American Southwest	555	Tropical Deforestation	570
Marine Primary Production from Space	555	Edge Effects and Forest Fragmentation	573
Geographic Information Systems	556	A Global Perspective	573
23 Global Ecology	560	Concept Discussion: Human Influence	
The Atmospheric Envelope and the		on Atmospheric Composition	576
Greenhouse Earth	561	Depletion and Recovery of the Ozone Layer	578
Concepts	562	The Future	579
Concept Discussion: A Global System	563	Applications & Tools: Cooperative Research	
The Historical Thread	563	Networks for Global Ecology	579
El Niño Today	564	Appendix A Abbreviations Used	
El Niño and Marine Populations	565	in This Text	584
El Niño and the Great Salt Lake	567	Appendix B List of Chapter Concepts	586
El Niño and Terrestrial Populations in Australia	568	Appendix C Statistical Tables	588
Episodic Establishment by Perennial Plants	568	Glossary	592
El Niño and Kangaroo Populations	568	References	600
Concept Discussion: Human Activity		Credits	613
and the Global Nitrogen Cycle	569	Index	000
