PART I LIFE AND DEATH OF MICROORGANISMS

CHAPTER ONE Humans and the Microbial World 000

A Glimpse of History 000
Key Terms 000

- 1.1 The Origin of Microorganisms 000
Theory of Spontaneous Generation Revisited 000
- 1.2 Microbiology: A Human Perspective 000
Vital Activities of Microorganisms 000
Applications of Microbiology 000
Medical Microbiology 000
Microorganisms as Subjects for Study 000
- 1.3 The Microbial World 000
The Bacteria 000
The Archaea 000
The Eucarya 000
Nomenclature 000
- 1.4 Viruses, Viroids, and Prions 000
- 1.5 Size in the Microbial World 000

PERSPECTIVE 1.1: The Long and the Short of It 000

FUTURE CHALLENGES: Entering a New Golden Age 000

SUMMARY 000

REVIEW QUESTIONS 000

CHAPTER TWO The Molecules of Life 000

A Glimpse of History 000
Key Terms 000

- 2.1 Atoms and Elements 000
- 2.2 Chemical Bonds and the Formation of Molecules 000
Covalent Bonds 000
Non-Polar and Polar Covalent Bonds 000
Ionic Bonds 000
Hydrogen Bonds 000
- 2.3 Chemical Components of the Cell 000
Water 000
pH 000
Small Molecules in the Cell 000
Macromolecules and Their Component Parts 000
- 2.4 Proteins and Their Functions 000
Amino Acids Subunits 000
Peptide Bonds and Their Synthesis 000
Protein Structure 000
Substituted Proteins 000
- 2.5 Carbohydrates 000
Monosaccharides 000
Disaccharides 000
Polysaccharides 000
- 2.6 Nucleic Acids 000
DNA 000
RNA 000
- 2.7 Lipids 000
Simple Lipids 000
Compound Lipids 000

PERSPECTIVE 2.1: Isotopes: Valuable Tools for the Study of Biological Systems 000

FUTURE CHALLENGES 000

SUMMARY 000

REVIEW QUESTIONS 000

CHAPTER THREE**Microscopy and Cell Structure 000****A Glimpse of History 000****Key Terms 000****MICROSCOPY AND CELL MORPHOLOGY**

- 3.1** Microscopic Techniques: The Instruments 000
Principles of Light Microscopy: The Bright-Field Microscope 000
Light Microscopes That Increase Contrast 000
Electron Microscopes 000
Atomic Force Microscopy 000
- 3.2** Microscopic Techniques: Dyes and Staining 000
Differential Stains 000
Special Stains to Observe Cell Structures 000
Fluorescent Dyes and Tags 000
- 3.3** Morphology of Prokaryotic Cells 000
Shapes 000
Groupings 000
Multicellular Associations 000
- THE STRUCTURE OF THE PROKARYOTIC CELL**
- 3.4** The Cytoplasmic Membrane 000
Structure and Chemistry of the Cytoplasmic Membrane 000
Permeability of the Cytoplasmic Membrane 000
The Role of the Cytoplasmic Membrane in Energy Transformation 000
- 3.5** Directed Movement of Molecules Across the Cytoplasmic Membrane 000
Transport Systems 000
Secretion 000
- 3.6** Cell Wall 000
Peptidoglycan 000
The Gram-Positive Cell Wall 000
The Gram-Negative Cell Wall 000
Antibacterial Compounds That Target Peptidoglycan 000
Differences in Cell Wall Composition and the Gram Stain 000
Characteristics of Bacteria That Lack a Cell Wall 000
Cell Walls of the Domain Archaea 000
- 3.7** Surface Layers External to the Cell Wall 000
Capsules and Slime Layers 000
- 3.8** Filamentous Protein Appendages 000
Flagella 000
Pili 000

- 3.9** Internal Structures 000
The Chromosome 000
Plasmids 000
Ribosomes 000
Storage Granules 000
Gas Vesicles 000
Endospores 000

THE EUKARYOTIC CELL

- 3.10** The Plasma Membrane 000
- 3.11** Transfer of Molecules Across the Plasma Membrane 000
Transport Proteins 000
Endocytosis and Exocytosis 000
Secretion 000
- 3.12** Protein Structures Within the Cell 000
Cytoskeleton 000
Flagella and Cilia 000
- 3.13** Membrane-Bound Organelles 000
The Nucleus 000
Mitochondria 000
Chloroplasts 000
Endoplasmic Reticulum (ER) 000
The Golgi Apparatus 000
Lysosomes and Peroxisomes 000
- PERSPECTIVE 3.1:** The Origins of Mitochondria and Chloroplasts 000
- FUTURE CHALLENGES:** A Case of Breaking and Entering 000
- SUMMARY 000
REVIEW QUESTIONS 000

CHAPTER FOUR**Dynamics of Prokaryotic Growth 000****A Glimpse of History 000****Key Terms 000**

- 4.1** Principles of Prokaryotic Growth 000
- 4.2** Bacterial Growth in Nature 000
Biofilms 000
Interactions of Mixed Microbial Communities 000
- 4.3** Obtaining a Pure Culture 000
Cultivating Bacteria on a Solid Medium 000
The Streak-Plate Method 000
Maintaining Stock Cultures 000
- 4.4** Bacterial Growth in Laboratory Conditions 000
The Growth Curve 000
Colony Growth 000
Continuous Culture 000

4.5	Environmental Factors That Influence Microbial Growth 000 Temperature Requirements 000 Oxygen (O ₂) Requirements 000 pH 000 Water Availability 000	5.4	Using Other Physical Methods to Remove or Destroy Microbes 000 Filtration 000 Radiation 000 High Pressure 000
4.6	Nutritional Factors That Influence Microbial Growth 000 Required Elements 000 Growth Factors 000 Energy Sources 000 Nutritional Diversity 000	5.5	Using Chemicals to Destroy Microorganisms and Viruses 000 Potency of Germicidal Chemical Formulations 000 Selecting the Appropriate Germicidal Chemical 000 Classes of Germicidal Chemicals 000
4.7	Cultivating Prokaryotes in the Laboratory 000 General Categories of Culture Media 000 Special Types of Culture Media 000 Providing Appropriate Atmospheric Conditions 000 Enrichment Cultures 000	5.6	Preservation of Perishable Products 000 Chemical Preservatives 000 Low-Temperature Storage 000 Reducing the Available Water 000
4.8	Methods to Detect and Measure Bacterial Growth 000 Direct Cell Counts 000 Viable Cell Counts 000 Measuring Biomass 000 Detecting Cell Products 000		PERSPECTIVE 5.1: Contamination of an Operating Room by a Bacterial Pathogen 000
	PERSPECTIVE 4.1: Can Prokaryotes Live on Only Rocks and Water? 000		FUTURE CHALLENGES: Too Much of a Good Thing? 000
	FUTURE CHALLENGES: Seeing How the Other 99.9% Lives 000		SUMMARY 000
	SUMMARY 000		REVIEW QUESTIONS 000
	REVIEW QUESTIONS 000		
CHAPTER FIVE			
Control of Microbial Growth 000			
A Glimpse of History 000			
Key Terms 000			
5.1	Approaches to Control 000 Principles of Control 000 Situational Considerations 000	6.1	Principles of Metabolism 000 Harvesting Energy 000 Components of Metabolic Pathways 000 Scheme of Metabolism 000
5.2	Selection of an Antimicrobial Procedure 000 Type of Microorganism 000 Numbers of Microorganisms Initially Present 000 Environmental Conditions 000 Potential Risk of Infection 000 Composition of the Item 000	6.2	Enzymes 000 Mechanisms and Consequences of Enzyme Action 000 Cofactors and Coenzymes 000 Environmental Factors That Influence Enzyme Activity 000 Allosteric Regulation 000 Enzyme Inhibition 000
5.3	Using Heat to Destroy Microorganisms and Viruses 000 Moist Heat 000 Dry Heat 000	6.3	The Central Metabolic Pathways 000 Glycolysis 000 Pentose Phosphate Pathway 000 Transition Step 000 Tricarboxylic Acid (TCA) Cycle 000
		6.4	Respiration 000 The Electron Transport Chain—Generating Proton Motive Force 000 ATP Synthase—Harvesting the Proton Motive Force to Synthesize ATP 000 ATP Yield of Aerobic Respiration in Prokaryotes 000

6.5	Fermentation 000	7.6	Sensing and Responding to Environmental Fluctuations 000 Signal Transduction 000 Natural Selection 000
6.6	Catabolism of Organic Compounds Other Than Glucose 000 Polysaccharides and Disaccharides 000 Lipids 000 Proteins 000	7.7	Genomics 000 Analyzing a Prokaryotic DNA Sequence 000
6.7	Chemolithotrophs 000	PERSPECTIVE 7.1: From Junk Pile to Center Stage 000	
6.8	Photosynthesis 000 Capturing Radiant Energy 000 Converting Radiant Energy into Chemical Energy 000	FUTURE CHALLENGES: Gems in the Genomes? 000	
6.9	Carbon Fixation 000 Calvin Cycle 000	SUMMARY 000 REVIEW QUESTIONS 000	
6.10	Anabolic Pathways—Synthesizing Subunits from Precursor Molecules 000 Lipid Synthesis 000 Amino Acid Synthesis 000 Nucleotide Synthesis 000	CHAPTER EIGHT Bacterial Genetics 000	
PERSPECTIVE 6.1: Mining with Microbes 000		A Glimpse of History 000	
FUTURE CHALLENGES: Going to Extremes 000		Key Terms 000	
SUMMARY 000 REVIEW QUESTIONS 000		8.1	Diversity in Bacteria 000
CHAPTER SEVEN The Blueprint of Life, from DNA to Protein 000		GENE MUTATION AS A SOURCE OF DIVERSITY	
A Glimpse of History 000		8.2	Spontaneous Mutations 000 Base Substitution 000 Removal or Addition of Nucleotides 000 Transposable Elements (Jumping Genes) 000
Key Terms 000		8.3	Induced Mutations 000 Chemical Mutagens 000 Transposition 000 Radiation 000
7.1	Overview 000 Characteristics of DNA 000 Characteristics of RNA 000 Regulating the Expression of Genes 000	8.4	Repair of Damaged DNA 000 Repair of Errors in Base Incorporation 000 Repair of Thymine Dimers 000 Repair of Modified Bases in DNA 000 SOS Repair 000
7.2	DNA Replication 000 Initiation of DNA Replication 000 The Replication Fork 000	8.5	Mutations and Their Consequences 000
7.3	Gene Expression 000 Transcription 000 Translation 000	8.6	Mutant Selection 000 Direct Selection 000 Indirect Selection 000 Testing of Chemicals for Their Cancer-Causing Ability 000
7.4	Differences Between Eukaryotic and Prokaryotic Gene Expression 000	MECHANISMS OF GENE TRANSFER	
7.5	Regulating Gene Expression 000 Principles of Regulation 000 Mechanisms to Control Transcription 000	8.7	DNA-Mediated Transformation 000 Natural Competence 000 Artificial Competence 000
The lac Operon As a Model for Control of Metabolic Pathways 000		8.8	Transduction 000
		8.9	Plasmids 000 R Plasmids 000

<p>8.10 Conjugation 000 Plasmid Transfer 000 Chromosome Transfer 000 F' Donors 000</p> <p>8.11 Movement of Mobile Genetic Elements— Transposons 000 Structure of Transposons 000</p> <p>PERSPECTIVE 8.1: The Biological Function of DNA: A Discovery Ahead of Its Time 000</p> <p>PERSPECTIVE 8.2: Bacteria Can Conjugate with Plants: A Natural Case of Genetic Engineering 000</p> <p>FUTURE CHALLENGES: Hunting for Magic Bullets 000</p> <p>SUMMARY 000 REVIEW QUESTIONS 000</p> <p style="text-align: center;">CHAPTER NINE</p> <p style="text-align: center;">Biotechnology and Recombinant DNA 000</p> <p>A Glimpse of History 000 Key Terms 000</p> <p>9.1 Fundamental Tools Used in Biotechnology 000 Restriction Enzymes 000 Gel Electrophoresis 000 DNA Probes 000 Primers 000</p> <p style="text-align: center;">APPLICATIONS OF BIOTECHNOLOGY</p> <p>9.2 Applications of Genetic Engineering 000 Genetically Engineered Bacteria 000 Genetically Engineered Eukaryotes 000</p> <p>9.3 Applications of Probe Technologies 000 Colony Blotting 000 Southern Blotting 000 Fluorescence in situ Hybridization (FISH) 000 DNA Microarray Technologies 000</p> <p>9.4 Applications of DNA Sequencing 000</p> <p>9.5 Applications of the Polymerase Chain Reaction (PCR) 000</p> <p>9.6 Concerns Regarding DNA Technologies 000</p> <p style="text-align: center;">RECOMBINANT DNA TECHNIQUES</p> <p>9.7 Techniques Used in Genetic Engineering 000 Obtaining DNA 000 Generating a Recombinant DNA Molecule 000 Introducing the Recombinant DNA into a New Host 000</p> <p>9.8 Techniques Used in Probe Technologies 000 Obtaining a Probe 000</p>	<p>Techniques Used in Colony Blotting and Southern Blotting 000</p> <p>Techniques Used in Fluorescence in situ Hybridization 000</p> <p>Techniques Used in DNA Microarray Technologies 000</p> <p>9.9 Techniques Used in DNA Sequencing 000 Dideoxy Chain Termination Method 000 Automated DNA Sequencing 000</p> <p>9.10 Techniques Used in the Polymerase Chain Reaction (PCR) 000 The Three-Step Amplification Cycle 000 Generating a Discrete-Sized Fragment 000 Selecting Primer Pairs 000</p> <p>PERSPECTIVE 9.1: Science Takes the Witness Stand 000</p> <p>FUTURE CHALLENGES: Beyond Genomics 000</p> <p>SUMMARY 000 REVIEW QUESTIONS 000</p> <div style="text-align: center; border: 1px solid black; width: 100px; height: 100px; margin: 20px auto;"></div> <p style="text-align: center;">PART II</p> <p style="text-align: center;">THE MICROBIAL WORLD</p> <hr/> <p style="text-align: center;">CHAPTER TEN</p> <p style="text-align: center;">Identification and Classification of Prokaryotes 000</p> <p>A Glimpse of History 000 Key Terms 000</p> <p>10.1 Principles of Taxonomy 000 Strategies Used to Identify Prokaryotes 000 Strategies Used to Classify Prokaryotes 000 Nomenclature 000</p> <p>10.2 Using Phenotypic Characteristics to Identify Prokaryotes 000 Microscopic Morphology 000 Metabolic Capabilities 000 Serology 000 Fatty Acid Analysis (FAME) 000</p> <p>10.3 Using Genotypic Characteristics to Identify Prokaryotes 000</p> <p>Nucleic Acid Probes to Detect Specific Nucleotide Sequences 000</p>
---	--

Amplifying Specific DNA Sequences Using the Polymerase Chain Reaction 000	
Sequencing Ribosomal RNA Genes 000	
10.4 Characterizing Strain Differences 000	
Biochemical Typing 000	
Serological Typing 000	
Genomic Typing 000	
Phage Typing 000	
Antibiograms 000	
10.5 Classifying Prokaryotes 000	
16S rDNA Sequence Analysis 000	
DNA Hybridization 000	
DNA Base Ratio (G + C Content) 000	
Phenotypic Methods 000	
PERSPECTIVE 10.1: Tracing the Source of an Outbreak of Foodborne Diseases 000	
FUTURE CHALLENGES: Tangled Branches in the Phylogenetic Tree 000	
SUMMARY 000	
REVIEW QUESTIONS 000	
CHAPTER ELEVEN	
The Diversity of Prokaryotic Organisms 000	
A Glimpse of History 000	
Key Terms 000	
METABOLIC DIVERSITY	
11.1 Anaerobic Chemotrophs 000	
Anaerobic Chemolithotrophs 000	
Anaerobic Chemoorganotrophs—Anaerobic Respiration 000	
Anaerobic Chemoorganotrophs: Fermentation 000	
11.2 Anoxygenic Phototrophs 000	
The Purple Bacteria 000	
The Green Bacteria 000	
Other Anoxygenic Phototrophs 000	
11.3 Oxygenic Phototrophs 000	
The Cyanobacteria 000	
11.4 Aerobic Chemolithotrophs 000	
The Sulfur-Oxidizing Bacteria 000	
The Nitrifiers 000	
The Hydrogen-Oxidizing Bacteria 000	
11.5 Aerobic Chemoorganotrophs 000	
Obligate Aerobes 000	
Facultative Anaerobes 000	
ECOPHYSIOLOGY	
11.6 Thriving in Terrestrial Environments 000	
Bacteria That Form a Resting Stage 000	
Bacteria That Associate with Plants 000	
11.7 Thriving in Aquatic Environments 000	
Sheathed Bacteria 000	
Prosthecate Bacteria 000	
Bacteria That Derive Nutrients from Other Organisms 000	
Bacteria That Move by Unusual Mechanisms 000	
Bacteria That Form Storage Granules 000	
11.8 Animals As Habitats 000	
Bacteria That Inhabit the Skin 000	
Bacteria That Inhabit Mucous Membranes 000	
Obligate Intracellular Parasites 000	
11.9 Archaea That Thrive in Extreme Conditions 000	
Extreme Halophiles 000	
Extreme Thermophiles 000	
FUTURE CHALLENGES: Astrobiology: The Search for Life on Other Planets 000	
SUMMARY 000	
REVIEW QUESTIONS 000	
CHAPTER TWELVE	
The Eukaryotic Members of the Microbial World 000	
A Glimpse of History 000	
Key Terms 000	
12.1 Algae 000	
Classification of Algae 000	
Algal Habitats 000	
Structure of Algae 000	
Algal Reproduction 000	
Paralytic Shellfish Poisoning 000	
12.2 Protozoa 000	
Classification of Protozoa 000	
Protozoan Habitats 000	
Structure of Protozoa 000	
Protozoan Reproduction 000	
Protozoa and Human Disease 000	
12.3 Fungi 000	
Classification of Fungi 000	
Fungal Habitats 000	
Fungal Disease in Humans 000	
Symbiotic Relationships Between Fungi and Other Organisms 000	
Economic Importance of Fungi 000	

12.4 Slime Molds and Water Molds 000 Acellular and Cellular Slime Molds 000 Oomycetes (Water Molds) 000	14.1 Structure and Classification of Animal Viruses 000 Classification of Animal Viruses 000 Groupings Based on Routes of Transmission 000
12.5 Multicellular Parasites: Arthropods and Helminths 000 Arthropods 000 Helminths 000	14.2 Interactions of Animal Viruses with Their Hosts 000 Acute Infections 000 Persistent Infections 000
PERSPECTIVE 12.1: How Marine Phytoplankton Help Combat Global Warming 000	14.3 Viruses and Human Tumors 000 Retroviruses and Human Tumors 000
FUTURE CHALLENGES: Fighting Malaria with Effective Vaccines and Inexpensive Drugs 000	14.4 Viral Genetic Alterations 000 Genome Exchange in Segmented Viruses 000
SUMMARY 000 REVIEW QUESTIONS 000	14.5 Methods Used to Study Viruses 000 Cultivation of Host Cells 000 Quantitation 000
CHAPTER THIRTEEN	
Viruses of Bacteria 000	
A Glimpse of History 000	
Key Terms 000	
13.1 General Characteristics of Viruses 000 Virus Architecture 000 The Viral Genome 000 Replication Cycle—Overall Features 000	14.6 Plant Viruses 000 Spread of Plant Viruses 000 Insect Transmission of Plant Viruses 000
13.2 Virus Interactions with Host Cells 000 Lytic Phage Replication by Double-Stranded DNA Phages 000 Lytic Single-Stranded RNA Phages 000 Phage Replication in a Latent State—Phage Lambda 000 Extrusion Following Phage Replication—Filamentous Phages 000 Lytic Infection by Single-Stranded DNA Phages 000	14.7 Other Infectious Agents 000 Prions 000 Viroids 000
13.3 Transduction 000 Generalized Transduction 000 Specialized Transduction 000	PERSPECTIVE 14.1: A Whodunit in Molecular Virology 000
13.4 Host Range of Phages 000 Receptors on the Bacterial Surface 000 Restriction-Modification System 000	FUTURE CHALLENGES: Great Promise, Greater Challenges 000
PERSPECTIVE 13.1: Viral Soup 000	SUMMARY 000 REVIEW QUESTIONS 000
FUTURE CHALLENGES: “Take Two Phage and Call Me in the Morning” 000	
SUMMARY 000 REVIEW QUESTIONS 000	
PART III	
MICROORGANISMS AND HUMANS	
CHAPTER FIFTEEN	
The Innate Immune Response 000	
A Glimpse of History 000	
Key Terms 000	
15.1 Overview of the Innate Defenses 000	15.2 First-Line Defenses 000 Physical Barriers 000 Antimicrobial Substances 000 Normal Flora 000
15.2 First-Line Defenses 000 Physical Barriers 000 Antimicrobial Substances 000 Normal Flora 000	15.3 The Cells of the Immune System 000 Granulocytes 000 Mononuclear Phagocytes 000 Dendritic Cells 000 Lymphocytes 000
15.3 The Cells of the Immune System 000 Granulocytes 000 Mononuclear Phagocytes 000 Dendritic Cells 000 Lymphocytes 000	
A Glimpse of History 000	
Key Terms 000	

15.4 Cell Communication 000 Surface Receptors 000 Cytokines 000 Adhesion Molecules 000	16.5 Clonal Selection and Expansion of Lymphocytes 000
15.5 Sensor Systems 000 Toll-Like Receptors and NOD Proteins 000 The Complement System 000 Sensors That Detect Long Double-Stranded RNA (dsRNA) 000	16.6 B Lymphocytes and the Antibody Response 000 B-Cell Activation 000 Characteristics of the Primary Response 000 Characteristics of the Secondary Response 000 The Response to T-Independent Antigens 000
15.6 Phagocytosis 000 The Process of Phagocytosis 000 Specialized Attributes of Macrophages 000 Specialized Attributes of Neutrophils 000	16.7 T Lymphocytes: Antigen Recognition and Response 000 General Characteristics of T Cells 000 Activation of T Cells 000 Functions of T _C (CD8) Cells 000 Functions of T _H (CD4) Cells 000 Subsets of Dendritic Cells and T Cells 000
15.7 Inflammation—A Coordinated Response to Invasion or Damage 000 Factors That Initiate the Inflammatory Response 000 The Inflammatory Process 000 Outcomes of Inflammation 000 Apoptosis—Controlled Cell Death That Circumvents the Inflammatory Process 000	16.8 Natural Killer (NK) Cells 000
15.8 Fever 000	16.9 Lymphocyte Development 000 Generation of Diversity 000 Negative Selection of Self-Reactive B Cells 000 Positive and Negative Selection of Self-Reactive T Cells 000
PERSPECTIVE 15.1: For Schistosoma, the Inflammatory Response Delivers 000	PERSPECTIVE 16.1: What Flavor Are Your Major Histocompatibility Complex Molecules? 000
FUTURE CHALLENGES: Polishing the Magic Bullet 000	FUTURE CHALLENGES: Defining “Danger” 000
SUMMARY 000 REVIEW QUESTIONS 000	SUMMARY 000 REVIEW QUESTIONS 000
CHAPTER SIXTEEN	
The Adaptive Immune Response 000	
A Glimpse of History 000 Key Terms 000	
16.1 Strategy of the Adaptive Immune Response 000 Overview of Humoral Immunity 000 Overview of Cellular Immunity 000	
16.2 Anatomy of the Lymphoid System 000 Lymphatic Vessels 000 Secondary Lymphoid Organs 000 Primary Lymphoid Organs 000	
16.3 The Nature of Antigens 000	
16.4 The Nature of Antibodies 000 Structure and Properties of Antibodies 000 Protective Outcomes of Antibody-Antigen Binding 000 Immunoglobulin Classes 000	
CHAPTER SEVENTEEN	
Applications of Immune Responses 000	
A Glimpse of History 000 Key Terms 000	
IMMUNIZATION	
17.1 Principles of Immunization 000 Active Immunity 000 Passive Immunity 000	
17.2 Vaccines and Immunization Procedures 000 Attenuated Vaccines 000 Inactivated Vaccines 000 An Example of Vaccination Strategy—The Campaign to Eliminate Poliomyelitis 000 The Importance of Routine Immunizations for Children 000 Current Progress in Immunization 000	
IMMUNOLOGICAL TESTING	
17.3 Principles of Immunological Testing 000 Obtaining Antibodies 000 Quantifying Antigen-Antibody Reactions 000	

- 17.4** Observing Antigen-Antibody Aggregations 000
 Precipitation Reactions 000
 Agglutination Reactions 000
- 17.5** Using Labeled Antibodies to Detect Antigen-Antibody Interactions 000
 Fluorescent Antibody (FA) Tests 000
 Enzyme-Linked Immunosorbent Assay (ELISA) 000
 Western Blotting 000
 Fluorescence-Activated Cell Sorter (FACS) 000

PERSPECTIVE 17.1: Monoclonal Antibodies 000

FUTURE CHALLENGES: Global Immunization 000

SUMMARY 000

REVIEW QUESTIONS 000

CHAPTER EIGHTEEN

Immunologic Disorders 000

A Glimpse of History 000

Key Terms 000

- 18.1** Type I Hypersensitivities: Immediate
 IgE-Mediated 000
 Localized Anaphylaxis 000
 Generalized Anaphylaxis 000
 Immunotherapy 000
- 18.2** Type II Hypersensitivities: Cytotoxic 000
 Transfusion Reactions 000
 Hemolytic Disease of the Newborn 000
- 18.3** Type III Hypersensitivities: Immune
 Complex-Mediated 000
- 18.4** Type IV Hypersensitivities: Delayed
 Cell-Mediated 000
 Tuberculin Skin Test 000
 Contact Hypersensitivities 000
 Delayed Hypersensitivity in Infectious
 Diseases 000
- 18.5** Rejection of Transplanted Tissues 000
- 18.6** Autoimmune Diseases 000
 The Spectrum of Autoimmune Reactions 000
 Treatment of Autoimmune Diseases 000
- 18.7** Immunodeficiency Disorders 000
 Primary Immunodeficiencies 000
 Secondary Immunodeficiencies 000

PERSPECTIVE 18.1: The Fetus As an Allograft 000

FUTURE CHALLENGES: New Approaches to Correcting Immunologic Disorders 000

SUMMARY 000

REVIEW QUESTIONS 000

CHAPTER NINETEEN

Host-Microbe Interactions 000

A Glimpse of History 000

Key Terms 000

MICROBES, HEALTH, AND DISEASE

- 19.1** The Anatomical Barriers As Ecosystems 000
 Symbiotic Relationships Between Microorganisms and
 Hosts 000
- 19.2** The Normal Flora 000
 The Protective Role of the Normal Flora 000
 The Dynamic Nature of the Normal Flora 000
- 19.3** Principles of Infectious Diseases 000
 Pathogenicity 000
 Characteristics of Infectious Disease 000
- 19.4** Establishing the Cause of Infectious Disease 000
 Koch's Postulates 000
 Molecular Postulates 000

MECHANISMS OF PATHOGENESIS

- 19.5** Establishment of Infection 000
 Adherence 000
 Colonization 000
 Delivery of Effector Molecules to Host Cells 000
- 19.6** Invasion—Breaching the Anatomical Barriers 000
 Penetration of Skin 000
 Penetration of Mucous Membranes 000
- 19.7** Avoiding the Host Defenses 000
 Hiding Within a Host Cell 000
 Avoiding Killing by Complement Proteins 000
 Avoiding Destruction by Phagocytes 000
 Avoiding Antibodies 000
- 19.8** Damage to the Host 000
 Exotoxins 000
 Endotoxin and Other Bacterial Cell Wall
 Components 000
 Damaging Effects of the Immune Response 000
- 19.9** Mechanisms of Viral Pathogenesis 000
 Binding to Host Cells and Invasion 000
 Avoiding Immune Responses 000
 Viruses and Damage to the Host 000
- 19.10** Mechanisms of Eukaryotic Pathogenesis 000
 Fungi 000
 Eukaryotic Parasites 000

FUTURE CHALLENGES: Genetics of Pathogenicity 000

SUMMARY 000

REVIEW QUESTIONS 000

CHAPTER TWENTY	
Epidemiology 000	
A Glimpse of History 000	
Key Terms 000	
20.1	Principles of Epidemiology 000 Rate of Disease in a Population 000 Reservoirs of Infectious Agents 000 Portals of Exit 000 Transmission 000 Portals of Entry 000 Factors That Influence the Epidemiology of Disease 000
20.2	Epidemiological Studies 000 Descriptive Studies 000 Analytical Studies 000 Experimental Studies 000
20.3	Infectious Disease Surveillance 000 National Disease Surveillance Network 000 Worldwide Disease Surveillance 000
20.4	Trends in Disease 000 Reduction and Eradication of Disease 000 Emerging Diseases 000
20.5	Nosocomial Infections 000 Reservoirs of Infectious Agents in Hospitals 000 Transmission of Infectious Agents in Hospitals 000 Preventing Nosocomial Infections 000
PERSPECTIVE 20.1: Standard Precautions—Protecting Patients and Health Care Personnel 000	
FUTURE CHALLENGES: Maintaining Vigilance Against Bioterrorism 000	
SUMMARY 000	
REVIEW QUESTIONS 000	
CHAPTER TWENTY-ONE	
Antimicrobial Medications 000	
A Glimpse of History 000	
Key Terms 000	
21.1	History and Development of Antimicrobial Drugs 000 Discovery of Antimicrobial Drugs 000 Discovery of Antibiotics 000 Development of New Generations of Drugs 000
21.2	Features of Antimicrobial Drugs 000 Selective Toxicity 000 Antimicrobial Action 000 Spectrum of Activity 000 Tissue Distribution, Metabolism, and Excretion of the Drug 000
	Effects of Combinations of Antimicrobial Drugs 000 Adverse Effects 000 Resistance to Antimicrobials 000 Cost 000
21.3	Mechanisms of Action of Antibacterial Drugs 000 Antibacterial Medications That Inhibit Cell Wall Synthesis 000 Antibacterial Medications That Inhibit Protein Synthesis 000 Antibacterial Medications That Inhibit Nucleic Acid Synthesis 000 Antibacterial Medications That Inhibit Metabolic Pathways 000 Antibacterial Medications That Interfere with Cell Membrane Integrity 000 Antibacterial Medications That Interfere with Processes Essential to Mycobacterium tuberculosis 000
21.4	Determining the Susceptibility of a Bacterial Strain to an Antimicrobial Drug 000 Determining the Minimum Inhibitory and Bactericidal Concentrations 000 Conventional Disc Diffusion Method 000 Commercial Modifications of Antimicrobial Susceptibility Testing 000
21.5	Resistance to Antimicrobial Drugs 000 Mechanisms of Acquired Resistance 000 Acquisition of Resistance 000 Examples of Emerging Antimicrobial Resistance 000 Slowing the Emergence and Spread of Antimicrobial Resistance 000
21.6	Mechanisms of Action of Antiviral Drugs 000 Viral Uncoating 000 Nucleic Acid Synthesis 000 Assembly and Release of Viral Particles 000
21.7	Mechanisms of Action of Antifungal Drugs 000 Plasma Membrane Synthesis and Function 000 Cell Wall Synthesis 000 Cell Division 000 Nucleic Acid Synthesis 000
21.8	Mechanisms of Action of Antiprotozoan and Anthelmintic Drugs 000
PERSPECTIVE 21.1: Measuring the Concentration of an Antimicrobial Drug in Blood or Other Body Fluids 000	
FUTURE CHALLENGES: War with the Superbugs 000	
SUMMARY 000	
REVIEW QUESTIONS 000	

PART IV
INFECTIOUS DISEASES

CHAPTER TWENTY-TWO

Skin Infections 000

A Glimpse of History 000

Key Terms 000

- 22.1** Anatomy and Physiology 000
- 22.2** Normal Flora of the Skin 000
Diphtheroids 000
Staphylococci 000
Fungi 000
- 22.3** Bacterial Skin Diseases 000
Hair Follicle Infections 000
Staphylococcal Scaled Skin Syndrome 000
Streptococcal Impetigo 000
Rocky Mountain Spotted Fever 000
Lyme Disease 000
- 22.4** Skin Diseases Caused by Viruses 000
Chickenpox (Varicella) 000
Measles (Rubeola) 000
German Measles (Rubella) 000
Other Viral Rashes of Childhood 000
Warts 000
- 22.5** Skin Diseases Caused by Fungi 000
Superficial Cutaneous Mycoses 000

CASE PRESENTATION 000

PERSPECTIVE 22.1: The Ghost of Smallpox, An Evil Shade 000

FUTURE CHALLENGES: The Ecology of Lyme Disease 000

SUMMARY 000

REVIEW QUESTIONS 000

CHAPTER TWENTY-THREE

Wound Infections 000

A Glimpse of History 000

Key Terms 000

- 23.1** Anatomy and Physiology 000
Wound Abscesses 000
Anaerobic Wounds 000

- 23.2** Common Bacterial Wound Infections 000
Staphylococcal Wound Infections 000
Group A Streptococcal “Flesh Eaters” 000
Pseudomonas aeruginosa Infections 000
- 23.3** Diseases Due to Anaerobic Bacterial Wound Infections 000
“Lockjaw” (Tetanus) 000
Gas Gangrene (Clostridial Myonecrosis) 000
“Lumpy Jaw” (Actinomycosis) 000
- 23.4** Bacterial Bite Wound Infections 000
Pasteurella multocida Bite Wound Infections 000
Cat Scratch Disease 000
Streptobacillary Rat Bite Fever 000
Human Bites 000
- 23.5** Fungal Wound Infections 000
“Rose Gardener’s Disease” (Sporotrichosis) 000

CASE PRESENTATION 000

PERSPECTIVE 23.1: Infection Caused by a Human “Bite” 000

FUTURE CHALLENGES: Staying Ahead in the Race with Staphylococcus aureus 000

SUMMARY 000

REVIEW QUESTIONS 000

CHAPTER TWENTY-FOUR

Respiratory System Infections 000

A Glimpse of History 000

Key Terms 000

- 24.1** Anatomy and Physiology 000
The Mucociliary Escalator 000
- 24.2** Normal Flora 000

INFECTIONS OF THE UPPER RESPIRATORY SYSTEM

- 24.3** Bacterial Infections of the Upper Respiratory System 000
Strep Throat (Streptococcal Pharyngitis) 000
Diphtheria 000
Pinkeye, Earache, and Sinus Infections 000
- 24.4** Viral Infections of the Upper Respiratory System 000
The Common Cold 000
Adenoviral Pharyngitis 000

INFECTIONS OF THE LOWER RESPIRATORY SYSTEM

- 24.5** Bacterial Infections of the Lower Respiratory System 000
Pneumococcal Pneumonia 000

Klebsiella Pneumonia 000	LOWER DIGESTIVE SYSTEM INFECTIONS
Mycoplasmal Pneumonia 000	
Whooping Cough (Pertussis) 000	
Tuberculosis 000	
Legionnaires' Disease 000	
24.6 Viral Infections of the Lower Respiratory System 000	25.5 Bacterial Diseases of the Lower Digestive System 000
Influenza 000	Cholera 000
Respiratory Syncytial Virus Infections 000	Shigellosis 000
Hantavirus Pulmonary Syndrome 000	Escherichia coli Gastroenteritis 000
24.7 Fungal Infections of the Lung 000	Salmonellosis 000
Valley Fever (Coccidioidomycosis) 000	Campylobacteriosis 000
Spelunkers' Disease (Histoplasmosis) 000	25.6 Viral Diseases of the Lower Digestive System 000
CASE PRESENTATION 000	Rotaviral Gastroenteritis 000
PERSPECTIVE 24.1: Terror by Mail: Inhalation Anthrax 000	Norovirus Gastroenteritis 000
FUTURE CHALLENGES: Global Preparedness Vs. Emerging Respiratory Viruses 000	Hepatitis A 000
SUMMARY 000	Hepatitis B 000
REVIEW QUESTIONS 000	Hepatitis C 000
CHAPTER TWENTY-FIVE	25.7 Protozoan Diseases of the Lower Digestive System 000
Digestive System Infections 000	Giardiasis 000
A Glimpse of History 000	Cryptosporidiosis 000
Key Terms 000	Cyclosporiasis 000
25.1 Anatomy and Physiology 000	Amebiasis 000
The Mouth 000	CASE PRESENTATION 000
Salivary Glands 000	PERSPECTIVE 25.1: Ecology of Cholera 000
The Esophagus 000	FUTURE CHALLENGES: Defeating Diarrhea 000
The Stomach 000	SUMMARY 000
The Small Intestine 000	REVIEW QUESTIONS 000
The Pancreas 000	CHAPTER TWENTY-SIX
The Liver 000	Genitourinary Infections 000
The Large Intestine 000	A Glimpse of History 000
25.2 Normal Flora 000	Key Terms 000
25.2 The Mouth 000	26.1 Anatomy and Physiology 000
Intestines 000	The Urinary System 000
UPPER DIGESTIVE SYSTEM INFECTIONS	The Genital System 000
25.3 Bacterial Diseases of the Upper Digestive System 000	26.2 Normal Flora of the Genitourinary System 000
Tooth Decay (Dental Caries) 000	26.3 Urinary System Infections 000
Periodontal Disease 000	Bacterial Cystitis 000
Trench Mouth 000	Leptospirosis 000
Helicobacter pylori Gastritis 000	26.4 Non-Venereal Genital System Diseases 000
25.4 Viral Diseases of the Upper Digestive System 000	Bacterial Vaginosis 000
Herpes Simplex 000	Vulvovaginal Candidiasis 000
Mumps 000	Staphylococcal Toxic Shock Syndrome 000
	26.5 Sexually Transmitted Diseases: Scope of the Problem 000
	26.6 Bacterial STDs 000
	Gonorrhea 000
	Chlamydial Genital System Infections 000

	Syphilis 000
	Chancroid 000
26.7	Viral STDs 000
	Genital Herpes Simplex 000
	Papillomavirus STDs: Genital Warts and Cervical Cancer 000
	AIDS 000
26.8	Protozoal STDs 000
	“Trich” (Trichomoniasis) 000
	CASE PRESENTATION 000
	PERSPECTIVE 26.1: The Demise of Syphilis? 000
	FUTURE CHALLENGES: Getting Control of Sexually Transmitted Diseases 000
	SUMMARY 000
	REVIEW QUESTIONS 000

CHAPTER TWENTY-SEVEN

Nervous System Infections 000

	A Glimpse of History 000
	Key Terms 000
27.1	Anatomy and Physiology 000
	Pathways to the Central Nervous System 000
27.2	Bacterial Nervous System Infections 000
	Meningococcal Meningitis 000
	Listeriosis 000
	Hansen’s Disease (Leprosy) 000
	Botulism 000
27.3	Viral Diseases of the Nervous System 000
	Viral Meningitis 000
	Viral Encephalitis 000
	Infantile Paralysis, Polio (Poliomyelitis) 000
	Rabies 000
27.4	Fungal Diseases of the Nervous System 000
	Cryptococcal Meningoencephalitis 000
27.5	Protozoan Diseases of the Nervous System 000
	African Sleeping Sickness 000
27.6	Transmissible Spongiform Encephalopathies 000
	Transmissible Spongiform Encephalopathy Humans 000
	CASE PRESENTATION 000
	PERSPECTIVE 27.1: A Rabies Survivor! 000
	FUTURE CHALLENGES: Eradicate Polio: Then What? 000
	SUMMARY 000
	REVIEW QUESTIONS 000

CHAPTER TWENTY-EIGHT

Blood and Lymphatic Infections 000

	A Glimpse of History 000
	Key Terms 000
28.1	Anatomy and Physiology 000
	The Heart 000
	Arteries 000
	Veins 000
	Lymphatics 000
	Spleen 000
28.2	Bacterial Diseases of the Blood Vascular System 000
	Subacute Bacterial Endocarditis 000
	Gram-Negative Septicemia 000
28.3	Bacterial Diseases of the Lymph Nodes and Spleen 000
	“Rabbit Fever” (Tularemia) 000
	“Undulant Fever” (Brucellosis, “Bang’s Disease”) 000
	“Black Death” (Plague) 000
28.4	Viral Diseases of the Lymphoid and Blood Vascular Systems 000
	“Kissing Disease” (Infectious Mononucleosis, “Mono”) 000
	Yellow Fever 000
28.5	Protozoan Diseases 000
	Malaria 000
	CASE PRESENTATION 000
	PERSPECTIVE 28.1: Arteriosclerosis: The Infection Hypothesis 000
	PERSPECTIVE 28.2: Walter Reed and Yellow Fever 000
	FUTURE CHALLENGES: Rethinking Malaria Control 000
	SUMMARY 000
	REVIEW QUESTIONS 000

CHAPTER TWENTY-NINE

HIV Disease and Complications of Immunodeficiency 000

	A Glimpse of History 000
	Key Terms 000
29.1	Human Immunodeficiency Virus (HIV) Infection and AIDS 000
	HIV Disease 000
	HIV Vaccine Prospects 000
29.2	Malignant Tumors That Complicate Acquired Immunodeficiencies 000
	Kaposi’s Sarcoma 000
	B-Lymphocytic Tumors of the Brain 000
	Cervical and Anal Carcinoma 000

<p>29.3 Infectious Complications of Acquired Immunodeficiency 000 Pneumocystosis 000 Toxoplasmosis 000 Cytomegalovirus Disease 000 Mycobacterial Diseases 000</p> <p>CASE PRESENTATION 000</p> <p>PERSPECTIVE 29.1: Origin of AIDS-Causing Viruses 000</p> <p>FUTURE CHALLENGES: AIDS and Poverty 000</p> <p>SUMMARY 000 REVIEW QUESTIONS 000</p> <div style="text-align: center; margin: 20px 0;">  </div> <p style="text-align: center;">PART V APPLIED MICROBIOLOGY</p>	<p>30.5 Mutualistic Relationships Between Microorganisms and Eukaryotes 000 Mycorrhizae 000 Symbiotic Nitrogen-Fixers and Plants 000 Microorganisms and Herbivores 000</p> <p>PERSPECTIVE 30.1: Life on Mars? 000</p> <p>FUTURE CHALLENGES: Healing the Environment 000</p> <p>SUMMARY 000 REVIEW QUESTIONS 000</p> <p style="text-align: center;">CHAPTER THIRTY-ONE</p> <p style="text-align: center;">Environmental Microbiology: Treatment of Water, Wastes, and Polluted Habitats 000</p> <p style="text-align: center;">A Glimpse of History 000 Key Terms 000</p> <p>31.1 Microbiology of Wastewater Treatment 000 Biochemical Oxygen Demand (BOD) 000 Municipal Wastewater Treatment Methods 000 Individual Wastewater Treatment Systems 000</p> <p>31.2 Drinking Water Treatment and Testing 000 Water Treatment Processes 000 Water Testing 000</p> <p>31.3 Microbiology of Solid Waste Treatment 000 Sanitary Landfills for Solid Waste Disposal 000 Municipal and Backyard Composting—Alternative to Landfills 000</p> <p>31.4 Microbiology of Bioremediation 000 Pollutants 000 Means of Bioremediation 000</p> <p>PERSPECTIVE 31.1: Now They're Cooking with Gas 000</p> <p>FUTURE CHALLENGES: Better Identification of Pathogens in Water and Wastes 000</p> <p>SUMMARY 000 REVIEW QUESTIONS 000</p> <p style="text-align: center;">CHAPTER THIRTY-TWO</p> <p style="text-align: center;">Food Microbiology 000</p> <p style="text-align: center;">A Glimpse of History 000 Key Terms 000</p> <p>32.1 Factors Influencing the Growth of Microorganisms in Foods 000 Intrinsic Factors 000 Extrinsic Factors 000</p>
<p style="text-align: center;">CHAPTER THIRTY</p> <p style="text-align: center;">Microbial Ecology 000</p> <p style="text-align: center;">A Glimpse of History 000 Key Terms 000</p> <p>30.1 Principles of Microbial Ecology 000 Nutrient Acquisition 000 Bacteria in Low-Nutrient Environments 000 Microbial Competition and Antagonism 000 Microorganisms and Environmental Changes 000 Microbial Communities 000 Studying Microbial Ecology 000</p> <p>30.2 Aquatic Habitats 000 Marine Environments 000 Freshwater Environments 000 Specialized Aquatic Environments 000</p> <p>30.3 Terrestrial Habitats 000 Characteristics of Soil 000 Microorganisms in Soil 000 The Rhizosphere 000</p> <p>30.4 Biogeochemical Cycling and Energy Flow 000 Carbon Cycle 000 Nitrogen Cycle 000 Sulfur Cycle 000 Phosphorus Cycle and Other Cycles 000 Energy Sources for Ecosystems 000</p>	

32.2 Microorganisms in Food and Beverage Production 000	SUMMARY 000
Lactic Acid Fermentations by the Lactic Acid Bacteria 000	REVIEW QUESTIONS 000
Alcoholic Fermentations by Yeast 000	
Changes Due to Mold Growth 000	
32.3 Food Spoilage 000	APPENDIX I Microbial Mathematics 000
Common Spoilage Bacteria 000	APPENDIX II Microbial Terminology 000
Common Spoilage Fungi 000	APPENDIX III Pronunciation Key for Bacterial, Fungal, Protozoan, and Viral Names 000
32.4 Foodborne Illness 000	APPENDIX IV Metabolic Pathways 000
Foodborne Intoxication 000	APPENDIX V Answers to Multiple Choice Questions 000
Foodborne Infection 000	GLOSSARY 000
32.5 Food Preservation 000	CREDITS 000
PERSPECTIVE 32.1: Botox for Beauty and Pain Relief 000	INDEX 000
FUTURE CHALLENGES: Using Microorganisms to Nourish the World 000
