About the Author iv

Preface xii

Acknowledgments xv

Guide to Experimental Techniques in Molecular Biology xvi

PART I

Introduction

CHAPTER 1

A Brief History 1

1.1 Transmission Genetics 2

Mendel's Laws of Inheritance 2

The Chromosome Theory of Inheritance 3

Box 1.1 Cell Structure 4

Genetic Recombination and Mapping 5

Box 1.2 Cell Cycle and Mitosis 6

Box 1.3 Meiosis 8

Physical Evidence for Recombination 10

1.2 Molecular Genetics 10

The Discovery of DNA 10

The Relationship between Genes and Proteins 11

Activities of Genes 11

1.3 The Three Domains of Life 15

CHAPTER 2

The Molecular Nature of Genes 17

2.1 The Nature of Genetic Material 18

Transformation in Bacteria 18

The Chemical Nature of Polynucleotides 20

2.2 DNA Structure 24

Experimental Background 24

The Double Helix 25

2.3 Genes Made of RNA 28

2.4 Physical Chemistry of Nucleic Acids 28

A Variety of DNA Structures 28

DNAs of Various Sizes and Shapes 32

CHAPTER 3

An Introduction to Gene Function 37

3.1 Storing Information 38

Overview of Gene Expression 38

Protein Structure 38
Protein Function 43
Discovery of Messenger RNA 44
Transcription 45
Translation 48
 3.2 Replication 53
 3.3 Mutations 53
Sickle Cell Disease 54

PART II

Methods of Molecular Biology

CHAPTER 4

Molecular Cloning Methods 58

4.1 Gene Cloning 59

The Role of Restriction Endonucleases 59
Vectors 62
Identifying a Specific Clone with a Specific Probe 71

4.2 The Polymerase Chain Reaction 72

cDNA Cloning 74

Box 4.1 Jurassic Park: More than a Fantasy? 75

4.3 Methods of Expressing Cloned Genes 78

Expression Vectors 79
Other Eukaryotic Vectors 85
Using the Ti Plasmid to Transfer Genes to Plants 85

CHAPTER 5

Molecular Tools for Studying Genes and Gene Activity 90

5.1 Molecular Separations 91

Gel Electrophoresis 91
Two-Dimensional Gel Electrophoresis 94
Ion-Exchange Chromatography 95
Gel Filtration Chromatography 95

5.2 Labeled Tracers 96

Autoradiography 96
Phosphorimaging 97
Liquid Scintillation Counting 98
Nonradioactive Tracers 98

5.3 Using Nucleic Acid Hybridization 99

Southern Blots: Identifying Specific DNA Fragments 99
DNA Fingerprinting and DNA Typing 101
Forensic Uses of DNA Fingerprinting and DNA Typing 101
DNA Sequencing 105
Restriction Mapping 107

- Protein Engineering with Cloned Genes: Site-Directed Mutagenesis 112
- 5.4 Mapping and Quantifying Transcripts 113**
- S1 Mapping 114
 - Primer Extension 116
 - Run-off Transcription and G-Less Cassette Transcription 117
- 5.5 Measuring Transcription Rates in Vivo 119**
- Nuclear Run-on Transcription 119
 - Reporter Gene Transcription 119
 - Measuring Protein Accumulation in Vivo 122
- 5.6 Assaying DNA–Protein Interactions 122**
- Filter Binding 122
 - Gel Mobility Shift 123
 - DNase Footprinting 124
 - DMS Footprinting and Other Footprinting Methods 124
- 5.7 Knockouts 126**

PART III

Transcription in Prokaryotes

CHAPTER 6

The Mechanism of Transcription in Prokaryotes 132

- 6.1 RNA Polymerase Structure 132**
- Sigma (σ) as a Specificity Factor 133
- 6.2 Promoters 136**
- Binding of RNA Polymerase to Promoters 136
 - Promoter Structure 138
- 6.3 Transcription Initiation 139**
- The Function of σ 140
 - Structure and Function of σ 147
 - The Role of the α -Subunit in UP Element Recognition 152
- 6.4 Elongation 154**

Core Polymerase Functions in Elongation 154

Structure of the Elongation Complex 159

6.5 Termination of Transcription 171

Rho-Independent Termination 171

Rho-Dependent Termination 175

CHAPTER 7

Operons: Fine Control of Prokaryotic Transcription 182

7.1 The *lac* Operon 183

Negative Control of the *lac* Operon 184

Discovery of the Operon 184

Repressor–Operator Interactions 188

The Mechanism of Repression 189

Positive Control of the *lac* Operon 192
The Mechanism of CAP Action 193
7.2 The *ara* Operon 198
The *ara* Operon Repression Loop 198
Evidence for the *ara* Operon Repression Loop 200
Autoregulation of *araC* 202
7.3 The *trp* Operon 202
Tryptophan's Role in Negative Control of the *trp* Operon 202
Control of the *trp* Operon by Attenuation 203
Defeating Attenuation 204

CHAPTER 8

Major Shifts in Prokaryotic Transcription 212

8.1 Modification of the Host RNA Polymerase during Phage Infection 213
8.2 The RNA Polymerase Encoded in Phage T7 215
8.3 Control of Transcription During Sporulation 216
8.4 Genes with Multiple Promoters 218
The *B. subtilis spoVG* Gene 218
8.5 The *E. coli* Heat Shock Genes 220
8.6 Infection of *E. coli* by Phage λ 220
Lytic Reproduction of Phage λ 221
Establishing Lysogeny 229
Autoregulation of the *cI* Gene during Lysogeny 231
Determining the Fate of a λ Infection: Lysis or Lysogeny 236
Lysogen Induction 238

CHAPTER 9

DNA–Protein Interactions in Prokaryotes 242

9.1 The λ Family of Repressors 243
Box 9.1 X-Ray Crystallography 244
High-Resolution Analysis of λ Repressor–Operator Interactions 249
High-Resolution Analysis of Phage 434 Repressor–Operator Interactions 252
9.2 The *trp* Repressor 256
The Role of Tryptophan 256
9.3 General Considerations on Protein–DNA Interactions 258
Hydrogen Bonding Capabilities of the Four Different Base Pairs 258
The Role of DNA Shape in Specific Binding to Proteins 259
The Importance of Multimeric DNA-Binding Proteins 260
9.4 DNA-Binding Proteins: Action at a Distance 260
The *gal* Operon 260
Duplicated λ Operators 261
The *lac* Operon 264
Enhancers 264

PART IV

Transcription in Eukaryotes

CHAPTER 10

Eukaryotic RNA Polymerases and Their Promoters 271

10.1 Multiple Forms of Eukaryotic RNA Polymerase 272

Separation of the Three Nuclear Polymerases 272

The Roles of the Three RNA Polymerases 273

RNA Polymerase Subunit Structures 274

10.2 Promoters 287

Class II Promoters 287

Class I Promoters 291

Class III Promoters 292

10.3 Enhancers and Silencers 296

Enhancers 296

Silencers 298

CHAPTER 11

General Transcription Factors in Eukaryotes 302

11.1 Class II Factors 303

The Class II Preinitiation Complex 303

Structure and Function of TFIID 305

Structure and Function of TFIIB 317

Structure and Function of TFIIF 318

Structure and Function of TFIIH 318

Elongation Factors 323

The Polymerase II Holoenzyme 326

11.2 Class I Factors 327

The Core-Binding Factor 327

The UPE-Binding Factor 328

Structure and Function of SL1 329

11.3 Class III Factors 331

TFIIIA 332

TFIIIB and C 332

The Role of TBP 336

CHAPTER 12

Transcription Activators in Eukaryotes 342

12.1 Categories of Activators 343

DNA-Binding Domains 343

Transcription-Activating Domains 343

12.2 Structures of the DNA-Binding Motifs of Activators 344

Zinc Fingers 344

The GAL4 Protein 346

The Nuclear Receptors 347

Homeodomains 349
The bZIP and bHLH Domains 350
12.3 Independence of the Domains of Activators 351
12.4 Functions of Activators 352
Recruitment of TFIID 353
Recruitment of TFIIB 354
Recruitment of Other General Transcription Factors 357
Recruitment of the Holoenzyme 358
12.5 Interaction among Activators 361
Dimerization 361
Action at a Distance 362
Multiple Enhancers 365
Architectural Transcription Factors 366
Insulators 369
12.6 Regulation of Transcription Factors 372
Coactivators 372
Activator Ubiquitination 375
Activator Sumoylation 377
Activator Acetylation 377
Signal Transduction Pathways 378

CHAPTER 13

Chromatin Structure and Its Effects on Transcription 385

13.1 Histones 386
13.2 Nucleosomes 387
The Nucleosome Filament 390
The 30-nm Fiber 391
The Role of Histone H1 in Chromatin Folding 394
Higher Order Chromatin Folding 394
13.3 Chromatin Structure and Gene Activity 395
The Effects of Histones on 5S rRNA Gene Transcription 395
The Effects of Histones on Transcription of Class II Genes 398
Nucleosome Positioning 400
Histone Acetylation 405
Histone Deacetylation 407
Chromatin Remodeling 410
Heterochromatin and Silencing 414
Nucleosomes and Transcription _Elongation 419

PART V

Posttranscriptional Events

CHAPTER 14

Messenger RNA Processing I: Splicing 424

14.1 Genes in Pieces 425

Evidence for Split Genes 425

RNA Splicing 426

Splicing Signals 427

14.2 The Mechanism of Splicing of Nuclear mRNA Precursors 428

A Branched Intermediate 428

A Signal at the Branch 431

Spliceosomes 432

Snurps 432

Spliceosome Assembly and Function 444

Role of the RNA Polymerase II CTD 454

14.3 Self-Splicing RNAs 459

Group I Introns 459

Group II Introns 462

14.4 tRNA Splicing 464

CHAPTER 15

Messenger RNA Processing II: Capping and Polyadenylation 470

15.1 Capping 471

Cap Structure 471

Cap Synthesis 472

Functions of Caps 474

15.2 Polyadenylation 477

Poly(A) 477

Functions of Poly(A) 478

Basic Mechanism of Polyadenylation 480

Polyadenylation Signals 482

Cleavage and Polyadenylation of a Pre-mRNA 484

Poly(A) Polymerase 490

Turnover of Poly(A) 491

15.3 Coordination of mRNA Processing Events 493

Effect of Cap on Splicing 493

Effect of Poly(A) on Splicing 494

Binding of the CTD of Rpb1 to mRNA Processing Proteins 496

Changes in Association of RNA Processing Proteins with the CTD Correlate with

Changes in CTD Phosphorylation 498

Coupling Transcription Termination with mRNA 3'-End Processing 499

Mechanism of Termination 501

Role of Polyadenylation in mRNA Transport 504

CHAPTER 16

Other RNA Processing Events 510

16.1 Ribosomal RNA Processing 511

Eukaryotic rRNA Processing 511

Prokaryotic rRNA Processing 513

16.2 Transfer RNA Processing 514

Cutting Apart Polycistronic Precursors 514

Forming Mature 5'-Ends 514

Forming Mature 3'-Ends 516

16.3 *Trans*-Splicing 518

The Mechanism of *Trans*-Splicing 518

Polycistronic Arrangement of Coding Regions in Trypanosomes 520

16.4 RNA Editing 521

Mechanism of Editing 521

Editing by Nucleotide Deamination 524

16.5 Posttranscriptional Control of Gene Expression 526

Casein mRNA Stability 526

Transferrin Receptor mRNA Stability 527

16.6 Posttranscriptional Gene Silencing (RNA Interference) 535

PART VI

Translation

Chapter 17

The Mechanism of Translation I: Initiation 545

17.1 Initiation of Translation in Prokaryotes 546

tRNA Charging 546

Dissociation of Ribosomes 546

Formation of the 30S Initiation Complex 549

Formation of the 70S Initiation Complex 558

Summary of Initiation in Prokaryotes 559

17.2 Initiation in Eukaryotes 560

The Scanning Model of Initiation 561

Eukaryotic Initiation Factors 565

Overview of Translation Initiation in Eukaryotes 565

17.3 Control of Initiation 572

Prokaryotic Translational Control 572

Eukaryotic Translational Control 573

CHAPTER 18

The Mechanism of Translation II: Elongation and Termination 585

18.1 The Direction of Polypeptide Synthesis and of mRNA Translation 586

18.2 The Genetic Code 587

Nonoverlapping Codons 588

- No Gaps in the Code 588
- The Triplet Code 588
- Breaking the Code 590
- Unusual Base Pairs between Codon and Anticodon 590
- The (Almost) Universal Code 592
- 18.3 The Elongation Mechanism 594**
 - Overview of Elongation 594
 - A Three-Site Model of the Ribosome 595
 - Elongation Step 1: Binding an Aminoacyl-tRNA to the A Site of the Ribosome 598
 - Elongation Step 2: Peptide Bond Formation 605
 - Elongation Step 3: Translocation 608
 - The Structures of EF-Tu and EF-G 611
 - GTPases and Translation 612
- 18.4 Termination 613**
 - Termination Codons 613
 - Stop Codon Suppression 615
 - Release Factors 616
 - Dealing with Aberrant Termination 621
- 18.5 Posttermination 625**

CHAPTER 19

Ribosomes and Transfer RNA 630

- 19.1 Ribosomes 631**
 - Gross Ribosomal Structure 631
 - Fine Structure of the 70S Ribosome 632
 - Ribosome Composition 636
 - Ribosome Assembly 637
 - Fine Structure of the 30S Subunit 638
 - Fine Structure of the 50S Subunit 644
 - Polysomes 649
- 19.2 Transfer RNA 650**
 - The Discovery of tRNA 650
 - tRNA Structure 651
 - Recognition of tRNAs by Aminoacyl-tRNA Synthetase: The Second Genetic Code 654
 - Proofreading and Editing by Aminoacyl-tRNA Synthetases 659

PART VII

DNA Replication, Recombination, and Transposition

CHAPTER 20

DNA Replication I: Basic Mechanism and Enzymology 665

- 20.1 General Features of DNA Replication 666**
 - Semiconservative Replication 666
 - Semidiscontinuous Replication 668
 - Priming of DNA Synthesis 671
 - Bidirectional Replication 672

Unidirectional Replication 675

Rolling Circle Replication 675

20.2 Enzymology of DNA Replication 677

Strand Separation 677

Single-Strand DNA-Binding Proteins 678

Topoisomerases 680

Three DNA Polymerases in *E. coli* 685

Fidelity of Replication 690

Multiple Eukaryotic DNA Polymerases 691

20.3 DNA Damage and Repair 692

Damage Caused by Alkylation of Bases 692

Damage Caused by Ultraviolet Radiation 693

Damage Caused by Gamma and X-Rays 694

Directly Undoing DNA Damage 694

Excision Repair in Prokaryotes 695

Excision Repair in Eukaryotes 696

Double-Strand Break Repair in Eukaryotes 700

Mismatch Repair 701

Failure of Mismatch Repair in Humans 702

Coping with DNA Damage without Repairing It 702

CHAPTER 21

DNA Replication II: Detailed Mechanism 711

21.1 Speed of Replication 712

21.2 Initiation 713

Priming in *E. coli* 713

Priming in Eukaryotes 716

21.3 Elongation 721

The Pol II Holoenzyme and Processivity of Replication 721

21.4 Termination 733

Decatenation: Disentangling Daughter DNAs 733

Termination in Eukaryotes 735

Box 21.1 Telomeres, the Hayflick Limit, and Cancer 739

CHAPTER 22

Homologous Recombination 748

22.1 The RecBCD Pathway for Homologous Recombination 749

22.2 Experimental Support for the RecBCD Pathway 752

RecA 752

RecBCD 756

RuvA and RuvB 757

RuvC 760

22.3 Meiotic Recombination 764

The Mechanism of Meiotic Recombination: Overview 764

The Double-Stranded DNA Break 764

Creation of Single-Stranded Ends at DSBs 768

22.4 Gene Conversion 768

CHAPTER 23

Transposition 773

23.1 Bacterial Transposons 774

Discovery of Bacterial Transposons 774

Insertion Sequences: The Simplest Bacterial Transposons 775

More Complex Transposons 777

Mechanisms of Transposition 777

23.2 Eukaryotic Transposons 779

The First Examples of Transposable Elements: *DS* and *Ac* of Maize 779

P Elements 781

Rearrangement of Immunoglobulin Genes 782

Retrotransposons 787

PART VIII

Genomes

CHAPTER 24

Genomics and Proteomics 804

24.1 Positional Cloning: An Introduction to Genomics 805

Classical Tools of Positional Cloning 805

Identifying the Gene Mutated in a Human Disease 807

Box 24.1 Problems in Genetic Screening 811

24.2 Sequencing Genomes 812

The Human Genome Project 815

Vectors for Large-Scale Genome Projects 816

The Clone-by-Clone Strategy 817

Shotgun Sequencing 820

Sequencing Standards 821

Early Progress in Sequencing the Human Genome 822

Other Vertebrate Genomes 827

The Minimal Genome 829

24.3 Applications of Genomics 830

Functional Genomics Techniques 830

Other Applications 840

24.4 Proteomics 840

Protein Separations 841

Protein Analysis 841

Protein Interactions 842

Bioinformatics 846

Glossary 854

Index 879
