

# TABLE OF CONTENTS

Preface		xv
Chapter 1	<b>Introduction</b>	<b>3</b>
	1.1 Overview of the Text	3
	1.2 The Design Process: Relationship of Analysis to Design	5
	1.3 Strength and Serviceability	7
	1.4 Historical Development of Structural Systems	8
	1.5 Basic Structural Elements	11
	1.6 Assembling Basic Elements to Form a Stable Structural System	20
	1.7 Analyzing by Computer	23
	1.8 Preparation of Computations	24
	Summary	25
Chapter 2	<b>Design Loads</b>	<b>27</b>
	2.1 Building and Design Code	27
	2.2 Loads	28
	2.3 Dead Loads	29
	2.4 Live Loads	36
	2.5 Wind Loads	43
	2.6 Earthquake Forces	59
	2.7 Other Loads	63
	2.8 Load Combinations	64
	Summary	65
Chapter 3	<b>Statics of Structures—Reactions</b>	<b>73</b>
	3.1 Introduction	73
	3.2 Forces	74
	3.3 Supports	81
	3.4 Idealizing Structures	85
	3.5 Free-Body Diagrams	86
	3.6 Equations of Static Equilibrium	88
	3.7 Equations of Condition	94
	3.8 Influence of Reactions on Stability and Determinacy of Structures	97

	3.9	Classifying Structures	105
	3.10	Comparison Between Determinate and Indeterminate Structures	110
		Summary	112
<b>Chapter 4</b>		<b>Trusses</b>	<b>121</b>
	4.1	Introduction	121
	4.2	Types of Trusses	124
	4.3	Analysis of Trusses	125
	4.4	Method of Joints	126
	4.5	Zero Bars	130
	4.6	Method of Sections	131
	4.7	Determinacy and Stability	139
	4.8	Computer Analysis of Trusses	145
		Summary	148
<b>Chapter 5</b>		<b>Beams and Frames</b>	<b>163</b>
	5.1	Introduction	163
	5.2	Scope of Chapter	168
	5.3	Equations for Shear and Moment	169
	5.4	Shear and Moment Curves	176
	5.5	Principle of Superposition	194
	5.6	Sketching the Deflected Shape of a Beam or Frame	198
	5.7	Degree of Indeterminacy	203
		Summary	206
<b>Chapter 6</b>		<b>Cables</b>	<b>225</b>
	6.1	Introduction	225
	6.2	Characteristics of Cables	226
	6.3	Variation of Cable Force	227
	6.4	Analysis of a Cable Supporting Gravity (Vertical) Loads	228
	6.5	General Cable Theorem	229
	6.6	Establishing the Funicular Shape of an Arch	232
		Summary	235
<b>Chapter 7</b>		<b>Arches</b>	<b>241</b>
	7.1	Introduction	241
	7.2	Types of Arches	241
	7.3	Three-Hinged Arches	244
	7.4	Funicular Shape for an Arch That Supports a Uniformly Distributed Load	245
		Summary	250

Chapter 8	<b>Live Load Forces: Influence Lines for Determinate Structures</b>	<b>257</b>
	8.1 Introduction	257
	8.2 Influence Lines	257
	8.3 Construction of an Influence Line	258
	8.4 The Müller–Breslau Principle	267
	8.5 Use of Influence Lines	270
	8.6 Influence Lines for Girders Supporting Floor Systems	273
	8.7 Influence Lines for Trusses	279
	8.8 Live Loads for Highway and Railroad Bridges	284
	8.9 Increase–Decrease Method	287
	8.10 Absolute Maximum Live Load Moment	292
	8.11 Maximum Shear	296
	Summary	297
Chapter 9	<b>Deflections of Beams and Frames</b>	<b>309</b>
	9.1 Introduction	309
	9.2 Double Integration Method	309
	9.3 Moment–Area Method	317
	9.4 Elastic Load Method	336
	9.5 Conjugate Beam Method	340
	9.6 Design Aids for Beams	349
	Summary	352
Chapter 10	<b>Work–Energy Methods for Computing Deflections</b>	<b>363</b>
	10.1 Introduction	363
	10.2 Work	364
	10.3 Strain Energy	366
	10.4 Deflections by the Work–Energy Method (Real Work)	368
	10.5 Virtual Work: Trusses	370
	10.6 Virtual Work: Beams and Frames	387
	10.7 Finite Summation	399
	10.8 Bernoulli’s Principle of Virtual Displacements	401
	10.9 Maxwell–Betti Law of Reciprocal Deflections	404
	Summary	408

Chapter 11	<b>Analysis of Indeterminate Structures by the Flexibility Method</b>	<b>421</b>
	11.1 Introduction	421
	11.2 Concept of a Redundant	421
	11.3 Fundamentals of the Flexibility Method	422
	11.4 Alternative View of the Flexibility Method (Closing a Gap)	426
	11.5 Analysis Using Internal Releases	435
	11.6 Support Settlements, Temperature Change, and Fabrication Errors	444
	11.7 Analysis of Structures with Several Degrees of Indeterminacy	449
	11.8 Beam on Elastic Supports	456
	Summary	459
Chapter 12	<b>Analysis of Indeterminate Beams and Frames by the Slope-Deflection Method</b>	<b>469</b>
	12.1 Introduction	469
	12.2 Illustration of the Slope-Deflection Method	469
	12.3 Derivation of the Slope-Deflection Equation	471
	12.4 Analysis of Structures by the Slope-Deflection Method	478
	12.5 Analysis of Structures That Are Free to Sidesway	493
	12.6 Kinematic Indeterminacy	503
	Summary	504
Chapter 13	<b>Moment Distribution</b>	<b>513</b>
	13.1 Introduction	513
	13.2 Development of the Moment Distribution Method	514
	13.3 Summary of the Moment Distribution Method with No Joint Translation	519
	13.4 Analysis of Beams by Moment Distribution	520
	13.5 Modification of Member Stiffness	528
	13.6 Analysis of Frames That Are Free to Sidesway	544
	13.7 Analysis of an Unbraced Frame for General Loading	550

	13.8	Analysis of Multistory Frames	555
	13.9	Nonprismatic Members	556
		Summary	566
Chapter 14		<b>Indeterminate Structures: Influence Lines</b>	<b>575</b>
	14.1	Introduction	575
	14.2	Construction of Influence Lines Using Moment Distribution	576
	14.3	Müller–Breslau Principle	580
	14.4	Qualitative Influence Lines for Beams	582
	14.5	Live Load Patterns to Maximize Forces in Multistory Buildings	589
		Summary	599
Chapter 15		<b>Approximate Analysis of Indeterminate Structures</b>	<b>603</b>
	15.1	Introduction	603
	15.2	Approximate Analysis of a Continuous Beam for Gravity Load	605
	15.3	Approximate Analysis of a Rigid Frame for Vertical Load	611
	15.4	Approximate Analysis of a Continuous Truss	615
	15.5	Estimating Deflections of Trusses	621
	15.6	Trusses with Double Diagonals	623
	15.7	Approximate Analysis of a Multistory Rigid Frame for Gravity Load	626
	15.8	Analysis of Unbraced Frames for Lateral Load	635
	15.9	Portal Method	638
	15.10	Cantilever Method	646
		Summary	651
Chapter 16		<b>Introduction to the General Stiffness Method</b>	<b>659</b>
	16.1	Introduction	659
	16.2	Comparison Between Flexibility and Stiffness Methods	660
	16.3	Analysis of an Indeterminate Beam by the General Stiffness Method	665
		Summary	678

Chapter 17	<b>Matrix Analysis of Trusses by the Direct Stiffness Method</b>	<b>683</b>
17.1	Introduction	683
17.2	Member and Structure Stiffness Matrices	688
17.3	Construction of a Member Stiffness Matrix for an Individual Truss Bar	688
17.4	Assembly of the Structure Stiffness Matrix	690
17.5	Solution of the Direct Stiffness Method	693
17.6	Member Stiffness Matrix of an Inclined Truss Bar	697
17.7	Coordinate Transformation of a Member Stiffness Matrix	709
	Summary	710
Chapter 18	<b>Matrix Analysis of Beams and Frames by the Direct Stiffness Method</b>	<b>715</b>
18.1	Introduction	715
18.2	Structure Stiffness Matrix	717
18.3	The $2 \times 2$ Rotational Stiffness Matrix for a Flexural Member	718
18.4	The $4 \times 4$ Member Stiffness Matrix in Local Coordinates	729
18.5	The $6 \times 6$ Member Stiffness Matrix in Local Coordinates	739
18.6	The $6 \times 6$ Member Stiffness Matrix in Global Coordinates	748
18.7	Assembly of a Structure Stiffness Matrix—Direct Stiffness Method	750
	Summary	753
	Appendix Review of Basic Matrix Operations	757
	Glossary	769
	Answers to Odd-Numbered Problems	773
	Credits	778
	Index	779
