

# Contents

Preface xv

## 1 Understanding Our Environment 1

Learning Outcomes 1

**Case Study Saving the Reefs of Apo Island 2**

### 1.1 Understanding Our Environment 3

- We live on a marvelous planet 3
- What is environmental science? 3
- Environmental science is a global subject 4

### 1.2 Problems and Opportunities 4

- What persistent challenges do we face? 4

**Active Learning Finding Your Strengths in This Class (in-class activity) 5**

- There are also many signs of hope 6

### 1.3 Human Dimensions of Environmental Science 7

- Affluence has environmental costs 8
- Sustainability is a central theme 8
- Where do the rich and poor live? 8

**Exploring Science How Do We Know the State of Population, Poverty, and Other Issues? 9**

- Indigenous peoples are guardians of much of the world's biodiversity 10

### 1.4 Science Helps Us Understand Our Environment 11

- Science depends on skepticism and accuracy 11
- Deductive and inductive reasoning are both useful 12
- The scientific method is an orderly way to examine problems 12
- Understanding probability reduces uncertainty 13
- Experimental design can reduce bias 13

**Active Learning Calculating Probability 14**

- Science is a cumulative process 14

**Exploring Science Why Do Scientists Answer Questions with a Number? 15**

- What is sound science? 16
- Is environmental science the same as environmentalism? 16

### 1.5 Critical Thinking 16

- Critical thinking helps us analyze information 17
- What do you need to think critically? 17
- Critical thinking helps you learn environmental science 18

### 1.6 Where Do Our Ideas About the Environment Come From? 18

- Nature protection has historic roots 18
- Resource waste triggered pragmatic resource conservation (stage 1) 18
- Ethical and aesthetic concerns inspired the preservation movement (stage 2) 19
- Rising pollution levels led to the modern environmental movement (stage 3) 22
- Environmental quality is tied to social progress (stage 4) 22

**Conclusion 23**

**Data Analysis Working with Graphs 24**

## 2 Environmental Systems: Connections, Cycles, Flows, and Feedback Loops 26

Learning Outcomes 26

**Case Study Working to Rescue an Ecosystem 27**

### 2.1 Systems Describe Interactions 28

- Systems can be described in terms of their characteristics 28
- Systems can exhibit stability 29

### 2.2 Elements of Life 29

- Matter is recycled but doesn't disappear 29
- Elements have predictable characteristics 30
- Electric charges keep atoms together 30
- Acids and bases release reactive  $H^+$  and  $OH^-$  31
- Organic compounds have a carbon backbone 31
- Cells are the fundamental units of life 33
- Nitrogen and phosphorus are key nutrients 33

### 2.3 Energy 33

Energy occurs in different types and qualities 34

#### Exploring Science A “Water Planet” 34

Thermodynamics describes the conservation and degradation of energy 35

### 2.4 Energy for Life 35

Green plants get energy from the sun 36

How does photosynthesis capture energy? 36

### 2.5 From Species to Ecosystems 37

Organisms occur in populations, communities, and ecosystems 37

Food chains, food webs, and trophic levels link species 38

#### Active Learning Food Webs 38

#### Exploring Science Remote Sensing, Photosynthesis, and Material Cycles 39

Ecological pyramids describe trophic levels 40

### 2.6 Biogeochemical Cycles and Life Processes 40

The hydrologic cycle 41

The carbon cycle 41

The nitrogen cycle 44

The phosphorus cycle takes millions of years 46

The sulfur cycle 46

#### Conclusion 47

#### Data Analysis Examining Nutrients in a Wetland System 48

## 3 Evolution, Species Interactions, and Biological Communities 50

Learning Outcomes 50

#### Case Study Darwin’s Voyage of Discovery 51

##### 3.1 Evolution Leads to Diversity 52

Natural selection and adaptation modify species 52

All species live within limits 52

The ecological niche is a species’ role and environment 54

Speciation maintains species diversity 55

Taxonomy describes relationships among species 58

##### 3.2 Species Interactions Shape Communities of Species 59

Competition leads to resource allocation 59

Predation affects species relationships 59

Some adaptations help avoid predation 60

Symbiosis: Intimate relations among species 61

Keystone species: Influence all out of proportion 62

##### 3.3 The Growth of Species Populations 63

Growth without limits is exponential 63

Carrying capacity relates growth to its limits 63

Feedback produces logistic growth 64

Species respond to limits differently: *r*- and *K*-selected species 65

#### Active Learning Effect of *K* on Population Growth Rate (*rN*) 65

##### 3.4 Properties of Communities Depend on Species Diversity 66

Diversity and abundance 67

Species patterns create community structure 67

#### What Can You Do? Working Locally for Ecological Diversity 67

Community properties emerge from diversity and structure 69

#### Exploring Science Species Diversity Promotes Community Recovery 71

##### 3.5 Communities Are Dynamic and Change Over Time 72

The nature of communities is debated 72

Ecological succession describes a history of community development 72

Appropriate disturbances can benefit communities 73

#### Conclusion 74

#### Data Analysis Species Competition 75

## 4 Human Populations 76

Learning Outcomes 76

#### Case Study Family Planning in Thailand: A Success Story 77

##### 4.1 Past and Current Population Growth Are Very Different 78

Human populations grew slowly until recently 78

##### 4.2 Perspectives on Population Growth 79

Does environment or culture control human population growth? 79

#### Active Learning Population Doubling Time 79

Technology increases carrying capacity for humans 80

Population growth could bring benefits 80

##### 4.3 Many Factors Determine Population Growth 81

How many of us are there? 81

Fertility varies among cultures and at different times 84

Mortality offsets births 85

Life expectancy is rising worldwide 85

#### What Do You Think? China’s One-Child Policy 86

Living longer has profound social implications 87

##### 4.4 Fertility Is Influenced by Culture 88

People want children for many reasons 88

Education and income affect the desire for children 88

- 4.5 A Demographic Transition Can Lead to Stable Population Size 89**
  - Economic and social conditions change mortality and births 89
  - Many countries are in a demographic transition 90
  - Two ways to complete the demographic transition 90
  - Improving women's lives helps reduce birth rates 91
- 4.6 Family Planning Gives Us Choices 91**
  - Humans have always regulated their fertility 92
  - Today there are many options 92
- 4.7 What Kind of Future Are We Creating Now? 92**

**Conclusion 93**

**Data Analysis Communicating with Graphs 94**

## 5 Biomes and Biodiversity 96

Learning Outcomes 96

**Case Study Predators Help Restore-Biodiversity in Yellowstone 97**

### 5.1 Terrestrial Biomes 98

- Tropical moist forests are warm and wet year-round 100
- Tropical seasonal forests have annual dry seasons 101
- Tropical savannas and grasslands are dry most of the year 101

**Active Learning Comparing Biome Climates 101**

- Deserts are hot or cold, but always dry 102
- Temperate grasslands have rich soils 102
- Temperate scrublands have summer drought 103
- Temperate forests can be evergreen or deciduous 103
- Boreal forests lie north of the temperate zone 104
- Tundra can freeze in any month 104

### 5.2 Marine Environments 105

- Open ocean communities vary from surface to hadal zone 106
- Tidal shores support rich, diverse communities 106

**Active Learning Examining Climate Graphs 106**

### 5.3 Freshwater Ecosystems 108

- Lakes have extensive open water 108
- Wetlands are shallow and productive 109
- Streams and rivers are open systems 110

### 5.4 Biodiversity 110

- Increasingly, we identify species by genetic similarity 110
- Biodiversity hot spots are rich and threatened 110

### 5.5 Benefits of Biodiversity 111

- Biodiversity provides food and medicines 111
- Biodiversity can aid ecosystem stability 112
- Aesthetic and existence values are important 112

### 5.6 What Threatens Biodiversity? 112

- HIPPO summarizes human impacts 113

Habitat destruction is usually the main threat 113

Invasive species are a growing threat 116

**Exploring Science Using Telemetry to Monitor Wildlife 117**

Pollution poses many types of risk 119

**What Can You Do? You Can Help Preserve Biodiversity 119**

- Population growth consumes space, resources 120
- Overharvesting depletes or eliminates species 120

### 5.7 Endangered Species Protection 122

- Hunting and fishing laws protect useful species 122
- The Endangered Species Act protects habitat and species 123
- Recovery plans aim to rebuild populations 123
- Landowner collaboration is key 124
- The ESA has seen successes and controversies 124
- Many countries have species protection laws 124
- Habitat protection may be better than species protection 125

**Conclusion 126**

**Data Analysis Confidence Limits in the Breeding Bird Survey 127**

## 6 Environmental Conservation: Forests, Grasslands, Parks, and Nature Preserves 128

Learning Outcomes 128

**Case Study Saving the Great Bear Rainforest 129**

### 6.1 World Forests 130

- Boreal and tropical forests are most abundant 130
- Forests provide many valuable products 131

**Active Learning Calculating Forest Area 131**

- Tropical forests are being cleared rapidly 132
- Temperate forests also are at risk 134

**What Do You Think? Northern Spotted Owls 138**

**What Can You Do? Lowering Your Forest Impacts 139**

### 6.2 Grasslands 140

- Grazing can be sustainable or damaging 140
- Overgrazing threatens many rangelands 141
- Ranchers are experimenting with new methods 142

### 6.3 Parks and Preserves 142

**Exploring Science Using GIS to Protect Central African Forests 143**

- Many countries have created nature preserves 144
- Not all preserves are preserved 145

**Exploring Science Finding Common Ground on the Range 146**

- Marine ecosystems need greater protection 148
- Conservation and economic development can work together 148

Native people can play important roles in nature protection 149

**What Can You Do? Being a Responsible**

**Ecotourist 149**

Species survival can depend on preserve size and shape 150

**Conclusion 151**

**Data Analysis Detecting Edge Effects 152**

## 7 Food and Agriculture 153

Learning Outcomes 153

**Case Study Farming the Cerrado 154**

**7.1 Global Trends in Food and Nutrition 155**

Food security is unevenly distributed 155

Famines usually have political and social roots 157

**7.2 How Much Food Do We Need? 157**

**Active Learning Mapping Poverty and Plenty 157**

A healthy diet includes the right nutrients 158

Overeating is a growing world problem 158

More production doesn't necessarily reduce hunger 159

**7.3 What Do We Eat? 159**

Rising meat production is a sign of wealth 160

Seafood is both wild and farmed, but nearly all depends on wild-source inputs 161

**Active Learning Where in the World Did You Eat Today? 162**

Biohazards can arise in industrial production 162

**7.4 Living Soil Is a Precious Resource 162**

What is soil? 162

Healthy soil fauna can determine soil fertility 163

Your food comes mostly from the A horizon 164

**7.5 Ways We Use and Abuse Soil 165**

Arable land is unevenly distributed 165

Soil degradation reduces crop yields 165

Farming accelerates erosion 166

Wind and water move soil 166

**7.6 Agricultural Inputs 167**

Irrigation is often needed for high yields 167

Fertilizer boosts production 168

Modern agriculture runs on oil 168

Pesticides save crops but have health risks 168

**What Can You Do? Reducing the Pesticides in Your Food 169**

**7.7 How Have We Managed to Feed Billions? 172**

The green revolution has increased yields 172

Genetic engineering could have benefits and costs 172

Most GMOs are engineered for pesticide production or pesticide tolerance 173

Is genetic engineering safe? 174

**7.8 Sustainable Farming Strategies 174**

Soil conservation is essential 174

Groundcover protects the soil 175

Reduced tillage cuts erosion 175

**What Do You Think? Shade-Grown Coffee and Cocoa 176**

Low-input sustainable agriculture can benefit farmers, consumers, and the environment 177

**7.9 Consumers Help Shape Farming 177**

You can be a locavore 178

You can eat low on the food chain 178

**Conclusion 178**

**Data Analysis Mapping Your Food Supply 179**

## 8 Environmental Health and Toxicology 180

Learning Outcomes 180

**Case Study Defeating the Fiery Serpent 181**

**8.1 Environmental Health 182**

Global disease burden is changing 182

Emergent and infectious diseases still kill millions of people 183

Conservation medicine combines ecology and health care 185

Resistance to antibiotics and pesticides is increasing 186

Who should pay for health care? 187

**8.2 Toxicology 188**

How do toxics affect us? 188

**What Can You Do? Tips for Staying Healthy 188**

Endocrine hormone disruptors are of special concern 189

**8.3 Movement, Distribution, and Fate of Toxins 192**

Solubility and mobility determine when and where chemicals move 192

Exposure and susceptibility determine how we respond 193

Bioaccumulation and biomagnification increase chemical concentrations 193

Persistence makes some materials a greater threat 194

Chemical interactions can increase toxicity 195

**8.4 Mechanisms for Minimizing Toxic Effects 195**

Metabolic degradation and excretion eliminate toxics 195

Repair mechanisms mend damage 196

- 8.5 Measuring Toxicity 196**
  - We usually test toxic effects on lab animals 196
  - There is a wide range of toxicity 197
  - Acute versus chronic doses and effects 197
- Active Learning Assessing Toxins 197**
  - Detectable levels aren't always dangerous 198
  - Low doses can have variable effects 198
- Exploring Science The Epigenome 199**
- 8.6 Risk Assessment and Acceptance 200**
  - Our perception of risks isn't always rational 200
  - How much risk is acceptable? 201
- 8.7 Establishing Public Policy 202**
- Active Learning Calculating Probabilities 202**
- Conclusion 203**
- Data Analysis Graphing Multiple Variables 204**

## 9 Air: Climate and Pollution 205

Learning Outcomes 205

**Case Study When Wedges Do More than Silver Bullets 206**

- 9.1 What Is the Atmosphere? 207**
  - The atmosphere captures energy selectively 208
  - Evaporated water stores and redistributes heat 209
  - Ocean currents also redistribute heat 210
- 9.2 Climate Changes Over Time 211**
  - Ice cores tell us about climate history 211
  - What causes natural climatic swings? 211
  - El Niño/Southern Oscillation has far-reaching effects 212
- 9.3 How Do We Know the Climate Is Changing Faster than Usual? 213**
  - Scientific consensus is clear 213

**Active Learning The IPCC's Fourth Assessment Report (AR4) 213**

- Changes in heat waves, sea level, and storms are expected 214
- The main greenhouse gases are CO<sub>2</sub>, CH<sub>4</sub>, and N<sub>2</sub>O 214
- Evidence of climate change is overwhelming 218
- Controlling emissions is cheap compared to climate change 218

**Exploring Science How Do We Know That Climate Change Is Human-caused? 220**

- Why are there disputes over climate evidence? 221

- 9.4 Envisioning Solutions 223**
  - International protocols have tried to establish common rules 223
  - A wedge approach could fix the problem 223

- Local initiatives are everywhere 224
- Are there other ways to control carbon? 225

**What Can You Do? Reducing Individual CO<sub>2</sub> Emissions 225**

**Active Learning Calculate Your Carbon Reductions 226**

### 9.5 Air Pollution 226

- We describe pollutants according to sources 227
- Conventional pollutants are common and serious 228
- Indoor air can be more dangerous than outdoor air 229

### 9.6 Interactions Between Climate and Air Pollution 229

- Air pollutants can travel far 229
- Ozone in the stratosphere is harmed by CFCs 230
- CFC control has shown remarkable success 231
- Urban dust domes, smog, and heat islands 231

### 9.7 Effects of Air Pollution 231

- Polluted air damages lungs and tissues 231
- Plants are sensitive to pollutants 232
- Smog and haze reduce visibility 232
- SO<sub>4</sub> and NO<sub>x</sub> produce acid deposition 233

### 9.8 Air Pollution Control 234

- The best strategy is reducing production 234
- Clean air legislation is controversial 235

### 9.9 Current Conditions and Future Prospects 236

- Air pollution remains a problem, especially in developing regions 236
- Many places have improved greatly 236

**Conclusion 237**

**Data Analysis Examining the IPCC Fourth Assessment Report (AR4) 238**

## 10 Water: Resources and Pollution 239

Learning Outcomes 239

**Case Study When Will Lake Mead Go Dry? 240**

### 10.1 Water Resources 241

- The hydrologic cycle constantly redistributes water 241

### 10.2 Major Water Compartments 242

- Glaciers, ice, and snow contain most surface, fresh water 242
- Groundwater stores large resources 242

**Active Learning Mapping the Water-Rich and Water-Poor Countries 244**

- Rivers, lakes, and wetlands cycle quickly 244
- The atmosphere is one of the smallest compartments 244

<b>10.3</b>	<b>Water Availability and Use</b>	<b>244</b>
	Many countries experience water scarcity and stress	244
	Agriculture is our greatest water user	245
<b>10.4</b>	<b>Freshwater Shortages</b>	<b>246</b>
	Many people lack access to clean water	246
	Groundwater supplies are being depleted	247
	Diversion projects redistribute water	247
	<b>What Do You Think? China's South-to-North Water Diversion</b>	<b>248</b>
	Questions of justice often surround dam projects	248
	Would you fight for water?	249
<b>10.5</b>	<b>Water Management and Conservation</b>	<b>250</b>
	Everyone can help conserve water	250
	Efficiency is reducing water use in many areas	251
	<b>What Can You Do? Saving Water and Preventing Pollution</b>	<b>251</b>
<b>10.6</b>	<b>Water Pollution</b>	<b>252</b>
	Pollution includes point sources and nonpoint sources	252
	Biological pollution includes pathogens and waste	252
	Inorganic pollutants include metals, salts, and acids	254
	<b>Exploring Science Studying the Gulf Dead Zone</b>	<b>255</b>
	Organic chemicals include pesticides and industrial substances	256
	Is bottled water safer?	256
	Sediment and heat also degrade water	257
<b>10.7</b>	<b>Water Quality Today</b>	<b>257</b>
	The 1972 Clean Water Act protects our water	257
	Developing countries often have serious water pollution	259
	Groundwater is especially hard to clean up	260
	Ocean pollution has few controls	261
<b>10.8</b>	<b>Pollution Control</b>	<b>262</b>
	Nonpoint sources are often harder to control than point sources	262
	How do we treat municipal waste?	263
	Municipal treatment has three levels of quality	263
	Natural wastewater treatment can be an answer	264
	Remediation can involve containment, extraction, or biological treatment	264
<b>10.9</b>	<b>Water Legislation</b>	<b>265</b>
	The Clean Water Act was ambitious, popular, and largely successful	265
	<b>Conclusion</b>	<b>265</b>
	<b>Data Analysis Graphing Global Water Stress and Scarcity</b>	<b>269</b>

## 11 Environmental Geology and Earth Resources 270

	<b>Learning Outcomes</b>	<b>270</b>
	<b>Case Study Earthquake!</b>	<b>271</b>
<b>11.1</b>	<b>Earth Processes Shape Our Resources</b>	<b>272</b>
	Earth is a dynamic planet	272
	Tectonic processes reshape continents and cause earthquakes	272
<b>11.2</b>	<b>Minerals and Rocks</b>	<b>274</b>
	The rock cycle creates and recycles rocks	274
	Weathering and sedimentation	275
<b>11.3</b>	<b>Economic Geology and Mineralogy</b>	<b>276</b>
	Metals are essential to our economy	276
	Nonmetal mineral resources include gravel, clay, glass, and salts	276
	<b>Exploring Science Rare Earth Metals: The New Strategic Materials</b>	<b>278</b>
	Currently, the earth provides almost all our fuel	279
<b>11.4</b>	<b>Environmental Effects of Resource Extraction</b>	<b>279</b>
	Mining and drilling can degrade water quality	279
	<b>Active Learning What Geologic Resources Are You Using Right Now?</b>	<b>279</b>
	Processing contaminates air, water, and soil	281
<b>11.5</b>	<b>Conserving Geologic Resources</b>	<b>281</b>
	Recycling saves energy as well as materials	281
	New materials can replace mined resources	282
<b>11.6</b>	<b>Geologic Hazards</b>	<b>282</b>
	Earthquakes are frequent and deadly hazards	282
	Volcanoes eject deadly gases and ash	283
	Floods are part of a river's land-shaping processes	286
	Mass wasting includes slides and slumps	288
	Erosion destroys fields and undermines buildings	288
	<b>Conclusion</b>	<b>289</b>
	<b>Data Analysis Exploring Recent Earthquakes</b>	<b>290</b>

## 12 Energy 291

Learning Outcomes 291

**Case Study Renewable Energy in China** 292

### 12.1 Energy Resources and Uses 293

How do we measure energy? 293

Fossil fuels supply most of our energy 293

How do we use energy? 294

### 12.2 Fossil Fuels 295

Coal resources are vast 295

New plants could be cleaner 296

Have we passed peak oil? 296

Domestic oil supplies are limited 297

**Active Learning Driving Down Gas Costs** 298

Oil shales and tar sands contain huge amounts of petroleum 298

Natural gas is growing in importance 298

### 12.3 Nuclear Power 299

How do nuclear reactors work? 300

Nuclear reactor design 301

We lack safe storage for radioactive waste 301

**What Can You Do? Steps to Save Energy and Money** 302

### 12.4 Energy Conservation 302

Green building can cut energy costs by half 303

Cogeneration makes electricity from waste heat 303

### 12.5 Energy from Biomass 303

Ethanol and biodiesel can contribute to fuel supplies 304

**Exploring Science Can Biofuels Be Sustainable?** 305

Grasses and algae could grow fuel 306

Effects on food and environment are uncertain 306

Methane from biomass is efficient and clean 307

### 12.6 Wind and Solar Energy 307

Wind is our fastest growing energy source 307

Solar energy is diffuse but abundant 311

Passive solar absorbs heat; active solar pumps heated fluids 311

Concentrating solar power generates electricity 312

Photovoltaic cells generate electricity directly 312

### 12.7 Water Power 313

Most hydropower comes from large dams 314

Unconventional hydropower comes from tides and waves 314

Geothermal heat, tides, and waves could supply substantial amounts of energy in some places 315

### 12.8 Fuel Cells 315

Utilities are promoting renewable energy 316

### 12.9 What's Our Energy Future? 316

**Conclusion** 317

## 13 Solid and Hazardous Waste 319

Learning Outcomes 319

**Case Study The New Alchemy: Creating Gold from Garbage** 320

### 13.1 What Waste Do We Produce? 321

The waste stream is everything we throw away 321

### 13.2 Waste Disposal Methods 322

Open dumps release hazardous substances into the air and water 322

Ocean dumping is mostly uncontrolled 322

Landfills receive most of our waste 323

**Active Learning Life Cycle Analysis** 324

We often export waste to countries ill-equipped to handle it 324

Incineration produces energy from trash 325

**What Do You Think? Environmental Justice** 326

### 13.3 Shrinking the Waste Stream 327

Composting recycles organic waste 329

Reuse is even better than recycling 329

**What Can You Do? Reducing Waste** 332

Reducing waste is often the cheapest option 332

### 13.4 Hazardous and Toxic Wastes 333

Hazardous waste includes many dangerous substances 333

**Active Learning A Personal Hazardous Waste Inventory** 333

Federal legislation regulates hazardous waste 334

Superfund sites are listed for federal cleanup 335

Brownfields present both liability and opportunity 336

Hazardous waste must be processed or stored permanently 336

**Exploring Science Bioremediation** 337

**Conclusion** 338

**Data Analysis How Much Waste Do You Produce, and How Much Do You Know How to Manage?** 339

## 14 Economics and Urbanization 340

Learning Outcomes 340

**Case Study Vauban: A Car-free Suburb 341**

### 14.1 Cities Are Places of Crisis and Opportunity 342

- Large cities are expanding rapidly 343
- Immigration is driven by push and pull factors 344
- Congestion, pollution, and water shortages plague many cities 344
- Many cities lack sufficient housing 345

**What Do You Think? People for Community Recovery 345**

### 14.2 Urban Planning 347

- Transportation is crucial in city development 347
- We can make our cities more livable 348
- New urbanism incorporates smart growth 349

### 14.3 Economics and Sustainable Development 352

- Can development be sustainable? 353
- Our definitions of resources shape how we use them 353
- Ecological economics incorporates principles of ecology 354
- Scarcity can lead to innovation 355
- Communal property resources are a classic problem in economics 356

### 14.4 Natural Resource Accounting 357

**Active Learning Costs and Benefits 357**

- New approaches measure real progress 358
- Internalizing external costs 359

### 14.5 Trade, Development, and Jobs 359

- International trade can stimulate growth but externalize costs 359

**What Can You Do? Personally Responsible Consumerism 359**

**Exploring Science What Do You Think? 360**

- Socially responsible development can help people and protect their environment 361

**Active Learning Try Your Hand at Microlending 361**

### 14.6 Green Business and Green Design 362

- Green design is good for business and the environment 362
- Environmental protection creates jobs 363

**Conclusion 363**

**Data Analysis Using a Logarithmic Scale 365**

## 15 Environmental Policy and Sustainability 366

Learning Outcomes 366

**Case Study The Clean Water Act 367**

### 15.1 Environmental Policy and Law 368

- What drives policy making? 368
- Policy creation follows a cycle 369
- Cost-benefit analysis can aid priority setting 369

### 15.2 Major Environmental Laws 370

- NEPA (1969) establishes public oversight 370
- The Clean Air Act (1970) regulates air emissions 370

**Active Learning Environment, Science, and Policy in Your Community 370**

- The Clean Water Act (1972) protects surface water 371
- The Endangered Species Act (1973) protects wildlife 371
- The Superfund Act (1980) lists hazardous sites 371

### 15.3 How Are Policies Made? 374

- The legislative branch establishes statutes (laws) 374

### 15.4 International Policies 376

- Major International Agreements 376
- Enforcement often depends on national pride 378

### 15.5 What Can Individuals Do? 379

- Environmental education supports society 380
- Citizen science lets everyone participate 380
- How much is enough? 380

**Exploring Science The Christmas Bird Count 381**

### 15.6 Working Together 382

- Student action has lasting effects 382

**What Can You Do? Reducing Your Impact 383**

- National organizations are influential 384
- New players bring energy to environmental policy 384
- International nongovernmental organizations 385

### 15.7 Global Development Goals 386

- Equity is needed for sustainability 386
- Millennium assessments set development goals 387

**Conclusion 388**

**Data Analysis Examine Your Environmental Laws 389**

**Appendix 1** Vegetation Map A-2

**Appendix 2** World Population Density Map A-3

**Appendix 3** Temperature Regions and Ocean  
Currents Map A-4

**Glossary G-1 | Credits C-1 | Index I-1**

**List of Case Studies**

- Chapter 1 Understanding Our Environment**  
Saving the Reefs of Apo Island 2
- Chapter 2 Environmental Systems: Connections, Cycles,  
Flows, and Feedback Loops**  
Working to Rescue an Ecosystem 27
- Chapter 3 Evolution, Species Interactions, and Biological  
Communities**  
Darwin's Voyage of Discovery 51
- Chapter 4 Human Populations**  
Family Planning in Thailand: A Success Story 77
- Chapter 5 Biomes and Biodiversity**  
Predators Help Restore -Biodiversity in  
Yellowstone 97
- Chapter 6 Environmental Conservation: Forests,  
Grasslands, Parks, and Nature Preserves**  
Saving the Great Bear Rainforest 129

- Chapter 7 Food and Agriculture**  
Farming the Cerrado 154
- Chapter 8 Environmental Health and Toxicology**  
Defeating the Fiery Serpent 181
- Chapter 9 Air: Climate and Pollution**  
When Wedges Do More than Silver Bullets 206
- Chapter 10 Water: Resources and Pollution**  
When Will Lake Mead Go Dry? 240
- Chapter 11 Environmental Geology and Earth Resources**  
Earthquake! 271
- Chapter 12 Energy**  
Renewable Energy in China 292
- Chapter 13 Solid and Hazardous Waste**  
The New Alchemy: Creating Gold from  
Garbage 320
- Chapter 14 Economics and Urbanization**  
Vauban: A Car-free Suburb 341
- Chapter 15 Environmental Policy and Sustainability**  
The Clean Water Act 366
