

no single best approach. One of the characteristics of interdisciplinary science is that it is not constrained by the necessity of teaching certain facts or by traditions. It likewise cannot be imposed as a formal discipline, with certain facts to be learned. It is justified by its success in attracting and holding the attention and interest of students, making them a little wiser as they make their way toward various careers and callings.

- 4. Humanize science for nonscience majors.** Each chapter presents historical background where appropriate, uses everyday examples in developing concepts, and follows a logical flow of presentation. A discussion of the people and events involved in the development of scientific concepts puts a human face on the process of science. The use of everyday examples appeals to the nonscience major, typically accustomed to reading narration, not scientific technical writing, and also tends to bring relevancy to the material being presented. The logical flow of presentation is helpful to students not accustomed to thinking about relationships between what is being read and previous knowledge learned, a useful skill in understanding the sciences.

VALUED INPUT WENT INTO STRIVING TO MEET YOUR NEEDS

Text development today involves a team that includes authors and publishers and valuable input from instructors who share their knowledge and experience with publishers and authors through reviews and focus groups. Such feedback has shaped this edition, resulting in reorganization of existing content and expanded coverage in key areas. This text has continued to evolve as a result of feedback from instructors actually teaching integrated science courses in the classroom. Reviewers point out that current and accurate content, a clear writing style with concise explanations, quality illustrations, and dynamic presentation materials are important factors considered when evaluating textbooks. Those criteria have guided the revision of the *Integrated Science* text and the development of its ancillary resources.

New to This Edition

- Chapter 1:** A discussion of “Scientific Communication” was added in order to add detail to the discussion of the scientific method, making the topic more appropriate for nonscience majors.
- Chapter 3:** A discussion of “Simple Machines” and also a new Myths, Mistakes, and Misunderstandings on recycling were added.
- Chapter 4:** A discussion of “efficiency” was included at a level of depth and detail appropriate for nonscience majors.
- Chapter 8:** Discussions of potential energy of electrons and uses for semiconductors as well as an Example on frequency and energy of electrons were added.

Chapter 11: The discussion of high-level nuclear waste was updated, and a discussion of what happened at Fukushima I was added.

Chapter 19: A new People Behind the Science biography on polymer chemist, Roy J. Plunkett (inventor of Teflon), was included. Section 19.2, Extraterrestrial Origin for Life on Earth, was rewritten. Also, the Closer Look discussion on enzymes was moved into the main text, while new information on ways to increase the level of ‘good’ cholesterol was added. These changes improved the relevance of this material for nonscience majors.

Chapter 21: New information on “Goldilocks planets” was added. Also, the material on selection and herbicides was heavily revised, with new material also added.

Chapter 22: This chapter was heavily revised: references to Usher and “theist” were removed; the section on Paleontology and Archaeology was revised, with more emphasis on definite statements and findings; the section on Genus Homo was revised; discussion of the Multiregional Hypothesis was removed; and a cladogram and expanded sense of history were added to the section on Hominin Origins.

Chapter 23: The nitrogen cycle description and diagram were revised. A new People Behind the Science on Jane Lubchenco was also added.

Chapter 24: This chapter was revised to make it more relevant to the nonscience major: medical-related information on and more discussion of eating disorders was added; the use of technical terms in the introduction to the nervous system were eliminated; Concepts Applied on Check Out the Nutrition Labels, Taste versus Smell, and Antagonistic Muscles were added; Science and Society, What Happens When You Drink Alcohol, was added; a new People Behind the Science on Henry Molaison and William Beecher Scoville was added; new information of tanning, gastric reflux, and probiotics was added; and the section on Guidelines for Obtaining Adequate Nutrients and the information on the new MyPlate food guide from the USDA were updated.

Chapter 25: The coverage on sexually transmitted diseases was expanded; a new Myths, Mistakes, and Misunderstandings, Is It Sex?, was added; and the sections on Hormonal Control Methods, Changes in Sexual Function with Age, and fraternal twins were all rewritten in chapter 25.

Chapter 26: Information on stem cells was moved into the main text of the chapter in order to improve the relevancy of this material for nonscience majors.

Appendices: The appendices have been revised and reorganized to provide improved problem-solving assistance for students. The tips and formatting for problem solving have been moved prior to the solutions in order to provide this material to students prior to their viewing of the solutions. A discussion of the methodology for solving multiple-choice type problems was also added to the problem-solving appendix. The answers to the end-of-chapter Applying the Concepts questions were also moved to the appendix.

Questions for Thought: The number of Questions for Thought was increased in all chapters without Parallel

Exercises in order to increase the number of practice questions for students and assignable homework questions for instructors.

THE LEARNING SYSTEM

To achieve the goals stated, this text includes a variety of features that should make student's study of *Integrated Science* more effective and enjoyable. These aids are included to help you clearly understand the concepts and principles that serve as the foundation of the integrated sciences.

OVERVIEW TO INTEGRATED SCIENCE

Chapter 1 provides an overview or orientation to integrated science in general and this text in particular. It also describes the fundamental methods and techniques used by scientists to study and understand the world around us.

MULTIDISCIPLINARY APPROACH

Chapter Opening Tools

Core Concept and Supporting Concepts

Core and Supporting Concepts integrate the chapter concepts and the chapter outline. The Core and Supporting Concepts outline and emphasize the concepts at a chapter level. The supporting concepts list is designed to help students focus their studies by identifying the most important topics in the chapter outline.

Connections

The relationship of other science disciplines throughout the text are related to the chapter's contents. The core concept map, integrated with the chapter outline and supporting concepts list, the connections list, and overview, help students see the big picture of the chapter content and the even bigger picture of how that content relates to other science discipline areas.

Chapter Overviews

Each chapter begins with an introductory overview. The overview previews the chapter's contents and what students can expect to learn from reading the chapter. It adds to the general outline of the chapter by introducing students to the concepts to be covered. It also expands upon the core concept map, facilitating in the integration of topics. Finally, the overview will help students to stay focused and organized while reading the chapter for the first time. After reading this introduction, students should browse through the chapter, paying particular attention to the topic headings and illustrations so that they get a feel for the kinds of ideas included within the chapter.

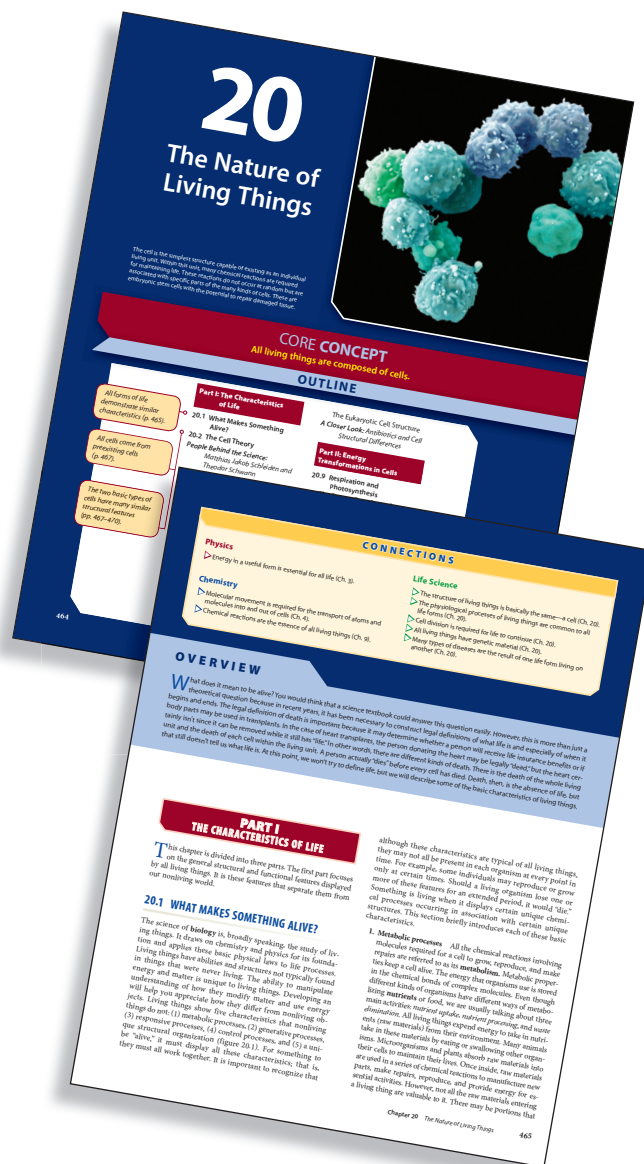

APPLYING SCIENCE TO THE REAL WORLD

Concepts Applied

As students look through each chapter, they will find one or more Concepts Applied boxes. These activities are simple exercises that students can perform at home or in the classroom to demonstrate important concepts and reinforce their understanding of them. This feature also describes the application of those concepts to their everyday lives.

Examples

Many of the more computational topics discussed within the chapters contain one or more concrete, worked Examples of a problem and its solution as it applies to the topic at hand. Through careful study of these Examples, students can better appreciate the many uses of problem solving in the sciences.

Appendix A

Mathematical Review

A.1 WORKING WITH EQUATIONS

Many of the problems of science involve an equation, a shorthand way of describing patterns and relationships that are observed in nature. Equations are also used to identify properties and to define certain concepts, but all uses have well-established meanings. Symbols that are used by convention, and allowed mathematical operations. This appendix will assist you in better understanding equations and the reasoning that goes with the manipulations.

Background

In addition to call operations and concepts. Among these are: The term **thing**. For example, subtraction, a reciprocal is between two numbers. **any number** is reciprocal of $\frac{1}{2}$ always gives a 5 to give 1 is of the other. The fraction $\frac{1}{2}$ key will press the 1/2 key again, the reciprocal of $\frac{1}{2}$ is 2. A ratio is a ratio of the numerator expression $\frac{1}{2}$ is 2, the ratio. Working-solving exercise needed to car

these operations to remember that a number (or a unit) divided by itself is equal to 1; for example,

$$\frac{5}{5} = 1 \quad \frac{1 \text{ inch}}{1 \text{ inch}} = 1 \quad \frac{5 \text{ inches}}{5 \text{ inches}} = 1$$

When one fraction is divided by another fraction, the operation commonly applied is to "invert the denominator and multiply." For example, $\frac{2}{3}$ divided by $\frac{1}{2}$ is

Glossary

A

abiotic factors involving parts of an organism's environment

absolute humidity a measure of the actual amount of water vapor in the air at a given time—for example, in grams per cubic meter

absolute magnitude a classification scheme to compare for the brightness that stars would appear to have if they were all at a defined, standard distance

absolute scale temperature scale set so that zero is absolute zero, the theoretical lowest temperature possible, at which all random motion ceases

absolute zero the theoretical lowest temperature possible, which occurs when all random motion of molecules has ceased

albedo the fraction of incident solar radiation that is reflected by a surface (asteroid, ice, or particle) to a surface (measured from a line perpendicular to the surface (the normal))

angle of reflection angle of a reflected ray in a plane from a surface (measured from the normal)

angle of incidence angle of an incident (arriving) ray or particle to a surface (measured from a line perpendicular to the surface (the normal))

angular momentum quantum number the quantum mechanical number in the shell of an atom that determines the energy levels of electrons within the atom

angular momentum quantum number the quantum mechanical number in the shell of an atom that determines the energy levels of electrons within the atom

anterior the front of the body, as seen from the front of the body

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

anterior cingulate cortex a part of the brain that is involved in emotion and decision-making

END-OF-TEXT MATERIAL

At the back of the text are appendices that give additional background details, charts, and answers to chapter exercises. Appendix E provides solutions for each chapter's follow-up Example exercises. There are also a glossary of all key terms, an index organized alphabetically by subject matter, and special tables printed on the inside covers for reference use.

“... many books addressing similar disciplines have a tendency to talk over a student's head, making a student frustrated further in a class they do not want to be attending. . . . Personally, I would admit that Integrated Science has a slight edge. The glossary seems up-to-date and centers in on words many non-science majors may not understand.”

—David J. DiMattio, St. Bonaventure University
