

readme.pdf

This file you're reading right now.

galapagos.jar

This is the jar file you need to add to the classpath (build path) in order to use the Turtle and TurtleDrawingWindow objects. If you use an IDE such as Eclipse or Netbeans, you add this jar file, as a referenced library, to your project. Please refer to your IDE's documentation for details on how to this.

doc

This directory contains the javadoc documentation for the users. Only two classes—Turtle and TurtleDrawingWindow—are included in the documentation. These two classes are the only classes the users need to know when writing the Turtle graphics programs. Open the index.html file.

doc_detailed

This directory contains the javadoc documentation for the implementors. The documentation includes all classes in the galapagos package. Since the source files are provided, those who want to know the details or modify the classes may want to go directly to the sources files and bypass this documentation. Open the index.html file.

galapagos

This directory contains the source files of all classes in the galapagos package. The source files are provided to those who want to study how the classes are implemented or to modify the classes.

sampleprograms

This directory includes sample user programs. These sample user programs illustrate how to use the Turtle objects.
