

## Chapter 5

### *Additional Case Study Work, Exercises and Projects*

- 5.F Identify another graphical standard. How obvious is the meaning of the elements of this standard? Can the elements be combined or can they only be used in isolation?

(Hint: Possible standards include Business Process Modelling Notation (BPMN), road signs, cartographic symbols on maps, symbols used in circuit diagrams.)

- 5.G Identify another graphical standard. (This can be the same as for Exercise 5.F.) How is the standard agreed? What organization is responsible for the standard? How can changes be made to the standard?
- 5.G Obtain a copy of the current UML Specification marked with change bars (which show where changes have been made from the previous version). Find a change to the graphical notation. Is the new version clearer, easier to understand, more intuitive, more logical?
- 5.H Draw an activity diagram with activity partitions for the activities involved in a borrower reserving a library book, being notified that it is ready for collection and collecting it.
